# **Notations Used in This Document**

## Notations used in the text

The symbols used in this document include the following:

Important	Indicates critical items that must be followed when handling hardware or operating software. If the procedures described are not followed, <a href="hardware failure">hardware failure</a> , data loss, and other serious malfunctions could occur.
Note	Indicates items that must be confirmed when handling hardware or operating software.
Tips	Indicates information that is helpful to keep in mind when using this server.

# Optical disk drive

This server is equipped with one of the following drives. These drives are referred to as *optical disk drive* in this document.

- DVD-ROM drive
- DVD Super MULTI drive

## Hard disk drive

Unless otherwise stated, hard disk drive described in this document refers to the following.

- Hard disk drive (HDD)
- Solid state drive (SSD)

## Removable media

Unless otherwise stated, removable media described in this document refers to the following.

- USB flash drive
- Flash FDD

# **Abbreviations of Operating Systems**

Windows Operating Systems are referred to as follows.

See Chapter 1 (1.2 Supported Windows OS) for detailed information.

Notations in this document	Official names of Windows
Windows Server 2019	Windows Server 2019 Standard
Willdows Server 2019	Windows Server 2019 Datacenter
Windows Server 2016	Windows Server 2016 Standard
vvilidows Server 2016	Windows Server 2016 Datacenter

# **Trademarks**

EXPRESSBUILDER, ESMPRO and ExpressUpdate are registered trademark of NEC Corporation.

Microsoft, Windows, and Windows Server are registered trademarks or trademarks of Microsoft Corporation in the United States and other countries.

All other product, brand, or trade names used in this publication are the trademarks or registered trademarks of their respective trademark owners.

# **Warnings and Additions to This Document**

- 1. Unauthorized reproduction of the contents of this document, in part or in its entirety, is prohibited.
- 2. This document is subject to change at any time without notice.
- 3. Do not make copies or alter the document content without permission from NEC Corporation.
- 4. If you have any concerns, or discover errors or omissions in this document, contact your sales representative.
- Regardless of article 4, NEC Corporation assumes no responsibility for effects resulting from your operations.
- 6. The sample values used in this document are not the actual values.

Keep this document for future reference.

#### **Latest editions**

This document was created based on the information available at the time of its creation. The screen images, messages and procedures are subject to change without notice. Substitute as appropriate when content has been modified.

The most recent version of the guide, as well as other related documents, is also available for download from the following website.

https://www.nec.com/

# NEC Express5800 Series Express5800/A2040e, A1040e

# **Installing Windows**

This chapter describes how to install Windows. Read through this chapter to set up the Windows correctly.

#### 1. Before Starting Setup

Describes applicable server models, installable Windows operating systems and supported upgrade methods.

#### 2. Installing Windows Server 2019

Describes how to install Windows Server 2019.

#### 3. Applying Starter Pack

Describes how to apply Starter Pack.

#### 4. Setting for collecting specific event logs

Describes how to setting for collecting specific event logs.

#### 5. Setting Up Device Drivers

Describes how to install and set up Device Drivers.

#### 6. Activating Windows

Describes how to Activating Windows to continue to use the system.

#### 7. Setup of Windows Server 2019 NIC Teaming (LBFO)

Describes how to Setup of Windows Server 2019 NIC Teaming (LBFO).

#### 8. Setting Up for Solving Problems

Describes the features that must be set up in advance so that the server can recover from any trouble early and precisely.

# Before Starting Setup

This section lists the confirmation items for setting up the Windows operating system.

# **1.1** Supported Models

The following models are supported by this document.

Model Names	Express5800/A2040e, A1040e
-------------	----------------------------

# 1.2 Supported Windows OS

You can install the following editions of Windows operating system. Windows Server 2019 is 64-bit(x64) only.

Windows OS		Boot mode	
		UEFI	Legacy
W. 1 0 0040	Standard	✓	N/A
Windows Server 2019	Datacenter	✓	N/A

✓: supported

# 1.3 Install Options

In this guide, the installation options of Windows Server 2019 are written as below.

- GUI-based installation option
   Written as "Desktop Experience" in this guide.
- CUI-based installation option

Written as "Server Core" in this guide.

Important

"Nano Server" is not supported on Express 5800 series servers.

# **1.4** Supported Mass Storage Controllers

The Starter Pack supports the following mass storage controllers.

	A2040e	A1040e
Controllers supported on an operating system by applying the Starter Pack		
NE3303-177 RAID Controller (1GB, RAID 0/1/5/6, RAID 10/50/60)	<b>√</b>	<b>√</b>
NE3303-178 RAID Controller (2GB, RAID 0/1/5/6, RAID 10/50/60)	✓	✓
Other Options		
NE3303-184 SAS Controller	✓	✓
NE3390-157A Fibre Channel Controller (1ch) (16Gbps/Optical)	✓	✓
NE3390-158A Fibre Channel Controller (2ch) (16Gbps/Optical)	✓	✓

✓: supported

# **1.5** Supported Optional LAN boards

The Starter Pack supports the following LAN boards.

	A2040e	A1040e	
LAN boards supported on an operatir	LAN boards supported on an operating system by applying the Starter Pack		
None	N/A	N/A	
Other Options			
NE3304-151M 1000BASE-T Adapter(2ch)	✓	✓	
NE3304-152M 1000BASE-T Adapter(4ch)	✓	✓	
NE3304-157 10GBASE-T Adapter(2ch)	✓	✓	
NE3304-158 10GBASE Adapter(SFP+/2ch)	<b>√</b>	✓	

√: supported

# 1.6 In-place Upgrade to Windows Server 2019

Performing an in-place upgrade from Windows Server 2016 to Windows Server 2019 is not recommended because this may adversely affect files and the registry.

If you want to use Windows Server 2019, please read this document (*Chapter 1 "2. Installing Windows Server 2019*") and back-up necessary user files prior to installation.

Tips

- An In-place Upgrade refers to upgrading the operating system to Windows Server 2019 by overwriting the existing operating system, Windows Server 2016, on the same server hardware.
- Performing upgrade from evaluation version to release version is not recommended since this may unexpectedly affect to system or applications.

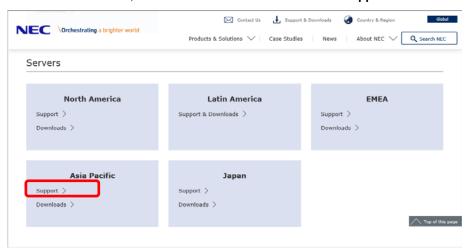

## 1.7 Downloads

First of all, download the Starter Pack for the applicable model.

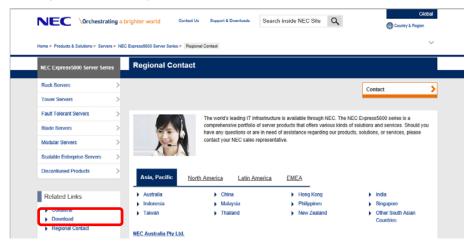

- 1. Downloading the Starter Pack.
  - Go to NEC Corporation Web site at <a href="https://www.nec.com/">https://www.nec.com/</a>.
     Click Support & Downloads.

(2) Under "PCs & Servers", find "Servers" - "Asia Pacific" and click Support.

(3) On "Regional Contact" page, and "Related Links" and click **Download**.

NEC \Orchestrating a brighter world Product Information Downloads - Express5800 Server Series Please input the model name, e.g:120E Recent updates Q Less than a week old (1) Less than a month old (39) Documents & Sys m Windows ■ ESMPRO ■ DianaScope ■ Utility ■ Technology Support Kits Software Gui paper ■Many-core ■ Scalable HA ■Thin Client ■ Other ■ Server ■Tower ■Rack ■Fa Server Terminals Options Express5800/110Ei Express5800/120Eq Express5800/T110b Express5800/110Ej Express5800/120Eh Express5800/T110f-E Express5800/110Gd ■ Express5800/120Ei Express5800/T110f-S Express5800/110Ge Express5800/120Li Express5800/T110g-E Express5800/GT110a Express5800/120Lj Express5800/T110g-S

(4) On "Downloads - Express5800 Server Series" page, click Windows Support Kits tab.

- (5) On "NEC Express5800 Server Series Microsoft® Windows Server® 2019 Support Kit" page, select the appropriate model name on the list of supported models.
- (6) Scroll down to Windows Server 2019 Support Kit section and download the module.
- 2. After downloading the Starter Pack, unzip the file in any folder (e.g. C:\TEMP) on the hardware. Folders which include double-byte characters or spaces in their names cannot be specified.

Tips If folder hierarchy is too deep, extraction of setup programs may not be performed correctly.

If you copy the Starter Pack to an optical disk such as a DVD, copy all the files and folders without changing the structure.

Tips

If you use a DVD, write the data in a format compatible with Windows operating system.

The DVD copying the modules is written as "Starter Pack DVD" in this guide.

After copying the modules, delete all the files and unzipped folders on the hardware.
 Download is now complete.

# 2. Installing Windows Server 2019

## 2.1 Before Starting Setup

Before you install Windows Server 2019, read this chapter carefully.

#### **COA label**

Scrape off with a coin or the like lightly the scratch that covers a part of the product key on the Certificate of Authenticity (COA) label. When you scrape, be careful not to break the part that the product key is printed on.

#### Windows Activation

To activate Windows Server 2019, enter the Product Key written on the COA label. The COA label of Windows Server 2019 is attached to the operating system media package or the server. See *Chapter 1 (6. License Authentication)*, for details.

#### **Starter Pack Application**

Starter Pack installs necessary drivers to Express5800 series servers.

Be sure to apply the Starter Pack.

#### **BIOS Update**

A BIOS update may be required to install Windows Server 2019.

To know if a BIOS update is required, check if there are applicable modules; go to [Windows Server 2019 Support kits] (shown in [1.7 Downloads]).

For the update procedure, refer to "Readme.txt" included in the downloaded data or instructions shown on the above web site when downloading the module.

#### **BMC Firmware Updates**

BMC Firmware updates may be required to install Windows Server 2019.

To know if BMC Firmware updates are required, check if there are applicable modules; go to [Windows Server 2019 Support Kits] (shown in [1.7 Downloads]).

For the update procedures, refer to "Readme.txt" included in the downloaded data or instructions shown on the above web site shown when downloading the modules.

#### **BIOS** setting

Change **Boot Mode** to **UEFI Mode**. See *Chapter 2 (1. System BIOS)* in *Maintenance Guide* for details

 $\textbf{Boot} \rightarrow \textbf{Boot mode select} \rightarrow \textbf{UEFI}$ 

Select **Enabled** for X2APIC feature of processor. See *Chapter 2 (1. System BIOS)* in *Maintenance Guide* for details.

 $\textbf{Advanced} \rightarrow \textbf{Processor Configuration} \rightarrow \textbf{X2APIC} \rightarrow \textbf{Enabled}$ 

At re-installation, open **Boot Option Priorities** in BIOS SETUP to make sure that the higher boot priority than **Windows Boot Manager** is specified for optical disk drive.

#### **Example of correct setting**

#### [Boot]-[Boot Option Priorities]

- Boot Option #1 [UEFI: Optical Disk Drive]
- Boot Option #2 [Windows Boot Manager]
- $\rightarrow$  The system can boot from OS installation media.

#### **Example of incorrect setting**

#### [Boot]-[Boot Option Priorities]

- Boot Option #1 [Windows Boot Manager]
- Boot Option #2 [UEFI: Optical Disk Drive]
- $\rightarrow$  The system cannot boot from OS installation media.

#### Note

- Before opening BIOS SETUP, be sure to insert OS installation media into optical disk drive.
- If **Windows Boot Manager** is not displayed in **Boot Option Priorities**, you need not to confirm the boot priority.

#### Hardware configuration

The following hardware configurations require special procedures.

#### Using RAID controller

Before you install Windows Server 2019, if using a RAID controller, build the RAID system in advance according to the User's Guide. The latest product manuals are available on NEC's corporate website (<a href="https://www.nec.com/">https://www.nec.com/</a>).

#### Installation When Multiple Logical Drives Exist

If you select wrong hard disk drive in Windows Server 2019 installation, the setup may erase existing data unexpectedly. Refer to displayed disk capacity or partition size to find target hard disk drive.

#### Reinstalling to a mirrored volume

When you install Windows Server 2019 in an environment with a mirrored volume created using Windows, disable mirroring before installing the operating system and enable it again after the installation. Use [Computer Management] – [Disk Management] to create, disable, or remove the mirrored volume.

#### Peripheral devices such as RDX

Remove a RDX device before installing an OS. Some peripheral devices need to be halted before installation. Refer to the manual provided with the peripheral devices for how to set a device appropriate to installation.

#### DAT, LTO, and similar media

Do not set media that is unnecessary to installation during setup.

#### Reinstalling to hard disk drives that have been upgraded to dynamic disks

If the hard disk drive has been upgraded to a dynamic disk, the operating system cannot be reinstalled to it with the existing partitions.

Set up the operating system with the Windows standard installer.

#### Setup when mass memory is installed

If mass memory is installed in your system, the large size of paging file is required at installation. Thus, the partition size for storing debug information (dump file) may not be secured.

If you fail to secure the dump file size, allocate the required file space to multiple disks by performing the following steps.

- 1. Set the system partition size to a size sufficient to install the OS and paging file.
- 2. Specify another disk as the destination to store the debug information (required dump file size) by referring to *Chapter 1 (8. Setup for Solving Problems*).

If the hard disk drive does not have enough space to write the debug information, set the partition size to a size sufficient to install the OS and paging file, and then add another hard disk drive for the dump file.

#### Note

If the partition size for installing Windows is smaller than the recommended size, expand the partition size or add another hard disk drive.

If sufficient space cannot be secured for the paging file, perform either of the following after installing Windows.

 Specify a hard disk drive other than the system drive as the location to store the paging file for collecting memory dump

Create a paging file of the installed memory size + 400MB (installed memory size + 1,100MB when the installed physical memory is 4TB or more) or more in a drive other than the system drive.

The paging file that exists in the first drive (in the order of drive letter C, D, E, ...) is used as the temporary memory dump location. Therefore, the size of the paging file must be "installed memory size + 400MB (installed memory size + 1,100MB when the installed physical memory is 4TB or more)" or more. Paging files in dynamic volumes are not used for dumping memory. The setting is applied after restarting the system.

#### **Example of correct setting**

- C: No paging file exists
- D: Paging file whose size is "installed memory size + 400MB\* " or more
- → The paging file in drive D can be used for collecting memory dump because its size satisfies the requirement.

#### Example of incorrect setting 1

- C: Paging file whose size is smaller than the installed memory size
- D: Paging file whose size is "installed memory size + 400MB\* " or more
- → The paging file in drive C is used for collecting memory dump, but collection may fail because the size of the paging file is smaller than the installed memory size.

#### Example of incorrect setting 2

- C: Paging file whose size is "installed memory size  $\times$  0.5"
- D: Paging file whose size is "installed memory size  $\times$  0.5"
- E: Paging file whose size is 400MB \*
- → The total paging file size in all drives is "installed memory size + 40 MB \* ", but collection may fail because only the paging file in drive C is used for collecting memory dump.

#### Example of incorrect setting 3

- C: No paging file exists
- D: Paging file whose size is "installed memory size + 400MB\* " or more (in dynamic volume)
- → Paging files in a dynamic volume cannot be used for collecting memory dump. Thus, collecting memory dump fails.
- \* This value is installed memory size +1,100MB when the installed memory size is 4TB or more.
- Specify a drive other than the system drive for "Dedicated Dump File".

Create the registry shown below by using the Registry Editor and specify the name of Dedicated Dump File.

<When specifying the file named "dedicateddumpfile.sys" in drive D>

Key: HKEY\_LOCAL\_MACHINE\SYSTEM \CurrentControlSet\Control\CrashControl

Name: DedicatedDumpFile

Type: REG\_SZ

Type. REG\_32

Data: D:\dedicateddumpfile.sys

Note the following when specifying Dedicated Dump File:

- Pay strict attention to edit the registry.
- The setting is applied after restarting the system.
- Specify a drive that has free space of "installed memory size + 400MB (installed memory size + 1,100MB when the installed physical memory is 4TB or more)" or more.
- Dedicated Dump File cannot be placed in dynamic volumes.
- Dedicated Dump File is only used for collecting memory dump, and is not used as virtual memory. Specify the paging file size so that sufficient virtual memory can be allocated in the entire system.

#### System partition size

The system partition size can be calculated by using the following formula.

Size required to install the OS + paging file size + dump file size + application size

#### **Desktop Experience**

Size required to install the OS = 12,400MB

Paging file size (recommended) = installed memory size + 400MB \*

Dump file size = installed memory size + 400MB \*

Application size = as required by the application

#### **Server Core**

Size required to install the OS = 8,600MB

Paging file size (recommended) = installed memory size + 400MB \*

= installed memory size + 400MB \*

= installed memory size + 400MB \*

= as required by the application

For example, if the installed memory size is 2GB(2,048MB), application size is 100MB, the partition size is calculated as follows:

```
12,400MB + (2,048MB + 400MB) + 2,048MB + 400MB + 100MB
= 17,396 MB
```

The above mentioned partition size is the minimum partition size required for system installation. Ensure that the partition size is sufficient for system operations.

The following partition sizes are recommended.

Desktop Experience : 32,768MB(32GB) or more Server Core : 32,768MB(32GB) or more

\*1GB = 1,024MB

Note

- The above paging file sizes are recommended for collecting debug information (dump file). The initial size of the Windows partition paging file must be large enough to store dump files.
  - Make sure you set a sufficient paging file size. If the paging file is insufficient, there will be a virtual memory shortage that may result in an inability to collect correct debug information.
- Regardless of the sizes of internal memory and write debug information, the
  maximum size of the dump file is "size of internal memory + 400MB (installed
  memory size + 1,100MB when the installed physical memory is 4TB or more)".
- When installing other applications or other items, add the amount of space needed by the application to the partition.

If the partition size for installing Windows is smaller than the recommended size, expand the partition size or add another hard disk drive.

<sup>\*</sup> This value is installed memory size +1,100MB when the installed memory size is 4TB or more.

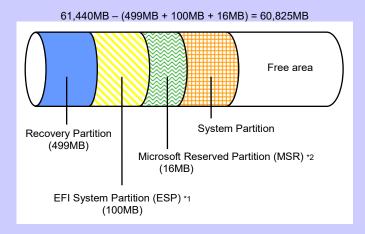

#### Tips

When creating a partition, Windows OS creates the following partitions at the top of hard disk drive.

Recovery Partition: 499MB
 EFI System Partition (ESP): 100MB \*1
 Microsoft Reserved Partition (MSR): 16MB \*2

615MB is allocated for these three partitions out of the specified partition size.

For example, when 61,440MB is specified for partition size, the area available free area is calculated as follows:

- \*1 May be 300MB in size depending on hard disk drive type.
- \*2 MSR is not displayed on Disk Management.

#### Windows Server 2019 Hyper-V support

Refer to the following web site for information related to Windows Server 2019 Hyper-V. http://www.58support.nec.co.jp/global/download/w2019/hyper-v/hyper-v-ws2019.html

#### Using BitLocker

If using BitLocker, note the following.

• Be sure to keep the recovery password secure. Do not keep it near a server running BitLocker.

#### Important

If the recovery password is not entered, the OS cannot be started, and the content of the partition encrypted by BitLocker cannot be referenced any more. The recovery password might be required at startup of the OS after the following:

- Replacement of motherboard
- Change of BIOS setting
- To reinstall the operating system into a partition that is encrypted with BitLocker, delete the BitLocker-encrypted partition prior to reinstallation.

#### Support for NIC teaming in Windows Server 2019

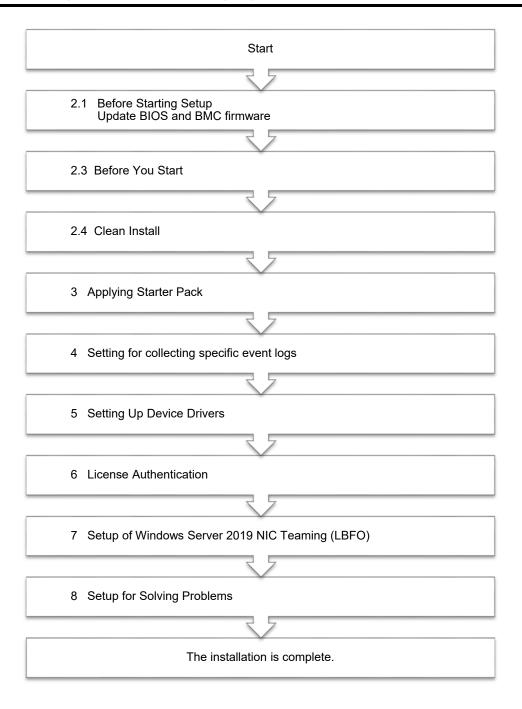

The NIC teaming feature, which used to be provided by network interface card (NIC) vendors, is built into Windows Server 2019. In Windows Server 2019, this feature is also called "load balancing and failover (LBFO)".

Refer to Chapter 1 (7. Setup of Windows Server 2019 NIC Teaming (LBFO)) and specify any required settings.

#### **Device Guard feature and Credential Guard feature**

Device Guard feature and Credential Guard feature are not available for Express Server.

# 2.2 Setting Up the Operating System

If you need to install applications after installing the operating system, refer to the application installation guides.

## 2.3 Before You Start

Before you install Windows Server 2019, check the BIOS settings and hard disk environment (disk array configuration, etc.) of your server referring to a product manual (users' guide, etc.). The latest product manuals are available on NEC's corporate website (<a href="https://www.nec.com/">https://www.nec.com/</a>).

#### 2.3.1 Preparation for Operating System Installation

Prepare the following media and instruction manuals before starting setup.

Items to necessary to prepare

- OS installation media \*need to purchase one of the following.
  - Microsoft operating system installation media (hereafter referred to as Windows Server 2019 DVD-ROM)
  - NEC operating system installation media (hereafter referred to as Backup DVD-ROM)
- ☐ Starter Pack for Windows Server 2019

Module Name	WS2019.80-002.0x.zip	
	* A different number replaces x. Apply the latest module.	

**Tips** 

For the details about the Starter Pack, see *Chapter 1* (*1.7 Downloads*) section. For copying the Starter Pack, prepare an optical disk.

Important

After installing Windows Server 2019, do not apply EXPRESSBUILDER or Starter Packs for Windows Server 2016 that we provide on our website. Starter Pack for Windows Server 2016 is not available on Windows Server 2019. Be sure to apply Starter Pack for Windows Server 2019 that suitable to purchased system.

☐ Windows Server 2019 Installation Guide (this document)

## **Clean Install**

This section shows the steps to clean install Windows Server 2019.

Note that existing old version of Windows will be deleted.

Turn on your display and server in that order.

Important Update the BIOS as needed referring to "BIOS Update" in "Chapter 1 (2.1 Before Starting Setup).

Boot from a backup DVD or Windows Server 2019 DVD-ROM.

The message "Press any key to boot from CD or DVD..." is displayed on the top of the screen.

Press <Enter> key to start the system from the installation media.

The following screen will appear as boot process proceeds.

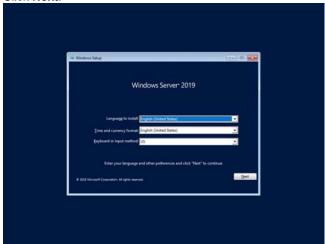

If you are using a backup DVD, the following screen will appear. Choose the Language you use.

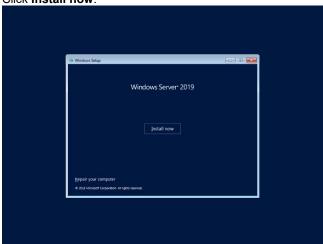

In case that "Windows Setup" window does not appear, <Enter> key was not pressed correctly in Step 2. Reboot the server and go back to Step 2.

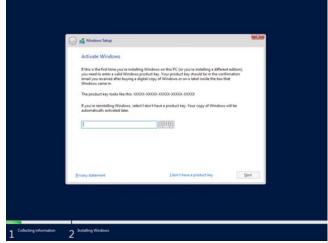

4. Click Next.

5. Click Install now.

6. Enter the product key and click **Next**.

Tips

If you are using a backup DVD-ROM, this screen does not appear.

Select the operating system you want to install

Depending system

Windows Serve 2019 Standard

Windows Serve 2019 Standard

Windows Serve 2019 Standard

Windows Serve 2019 Depending System (did a 301/20/2018)

Description:

(Recommending) This option ombs most of the Windows gaphosi environment Manage with a command premyt and Power/Delt, or remotely with Windows Admin Center or other tools.

Sent

7. Select the operating system you want to install and click **Next**.

The options listed on the screen vary depending on the installation media you are using.

Tips

Read the description on the screen and choose an installation option.

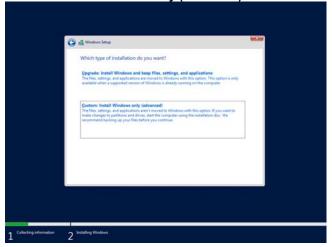

- Windows Server 2019 Standard or Windows Server 2019 Datacenter
  - $\rightarrow$  correspond to "Server Core" in this guide
- Windows Server 2019 Standard (Desktop Experience) or Windows
   Server 2019 Datacenter (Desktop Experience)
  - → correspond to "Desktop Experience" in this guide.
- 8. Read the license terms carefully.

If you agree, check I accept the license terms and click Next.

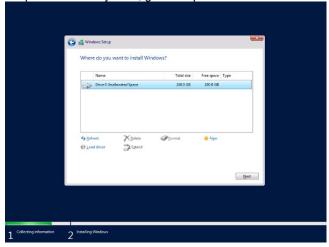

9. Select the type of installation you want.

Custom: Install Windows only (advanced) is selected below.

10. Click New.

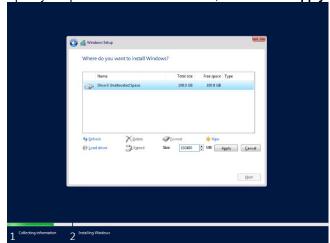

If a partition already exits, go to Step 13.

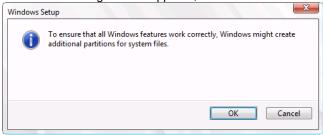

Tips

It  $\ensuremath{\textbf{NEW}}$  is not displayed on the screen, click  $\ensuremath{\textbf{Drive Options}}$  (advanced).

11. Specify the partition size in the text box, and the click **Apply**.

When the following window appears, click OK.

Tips

When you initially create a partition, the following three partitions are automatically created at the beginning of the hard disk.

- Recovery Partition
- EFI System Partition (ESP)
- Microsoft Reserved Partition (MSR)
- 12. Select the partition created in step 11, and then click Format.

Important

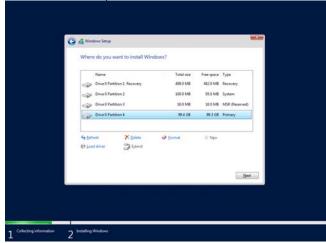

If the following window appears, read the message carefully and click [OK].

Be careful to choose a partition to format because the data stored on the partition will be cleared.

Windows Setup

This partition might contain important files or applications from your computer manufacturer. If you format this partition, any data stored on it will be lost.

13. Select the created partition, and then click Next.

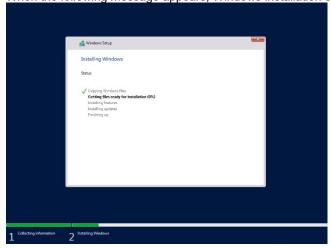

Tips

The number of partitions displayed differs depending on the hardware configuration.

If Starter Pack DVD is in the drive, change it to the OS disk, and then click **Refresh**.

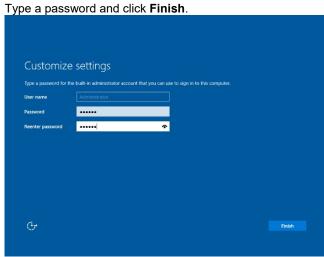

When the following message appears, Windows installation starts automatically.

When the installation is done, the system will automatically restart. After the system restart, continued the Windows Setup.

14. Set according to operating system selected in Step 7.

#### Desktop Experience

Press <Ctrl> + <Alt> + <Delete> to unlock.

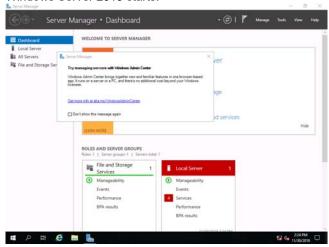

Type the password and press <Enter>.

Enter new password and press <Enter>.

When the following message appears, select OK and press <Enter>.

Windows Server 2019 starts.

- 15. Apply the Starter Pack referring to Chapter 1 (3. Applying Starter Pack).
- 16. See Chapter 1 (4. Setting for collecting specific event logs) to setup a team as needed.
- 17. Install and set up the drivers referring to Chapter 1 (5. Setting Up Device Drivers).
- 18. Confirm if the Windows is activated referring to Chapter 1 (6. License Authentication).
- 19. Set up the NIC Teaming as needed referring to Chapter 1 (7. Setup of Windows Server 2019 NIC Teaming (LBFO)).
- 20. Set up features referring to Chapter 1 (8. Setup for Solving Problems).

After the OS installation is completed, install applications as needed referring to the installation guide of each product.

Setup is now completed.

# 3. Applying Starter Pack

The Starter Pack contains drivers customized for the Express5800 Series.

Before starting to use the system, apply the necessary modules for Windows Server 2019(Starter Pack) dedicated for the model of your server. A Starter Pack for other server models cannot be used.

If you have not downloaded the Starter Pack, Go to Chapter 1(1.7 Downloads).

#### Important

Also install Starter Pack in the following cases.

- The motherboard of the server has been replaced
   (If a dialog box prompting you to reboot the system is displayed,
   reboot the system according to the on-screen instructions, and then apply the Starter Pack.)
- If the system was restored using a restore process
- Sign-in to Windows installed to the system using an account with administrative rights.
   If you use the Starter Pack copied on a DVD, place the media into the disk drive.
- 2. Click "Run," or type the following path in the command prompt and press <Enter>. Wail for a while (1 to 3 minutes) until the screen in Step3 appears.

<drive letter>:\<destination folder>\winnt\bin\pkgsetup.vbs

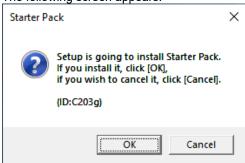

**Tips** 

A path which includes double-byte characters or the space character cannot be used here.

For example, if the Starter Pack is placed in *temp* folder in *D* drive, type the following path and press <Enter>.

D:\temp\winnt\bin\pkgsetup.vbs

3. The following screen appears.

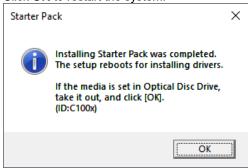

Wait until the installation of the Starter Pack is complete. (About 2 to 5 minutes)

Note

The screen may black out instantaneously or resolution may change while Starter Pack is installed, but it is not a failure.

4. Click **OK** to restart the system.

Installation of Starter Pack is now complete.

# 4. Setting for collecting specific event logs

## (1) Desktop Experience

Sign-in to the account with an Administrators privilege for following settings.

- (1) Press <Windows logo> + <R> key to start Run.
- (2) Type "gpedit.msc", and then press <Enter> key. Local Group Policy Editor is displayed.
- (3) Click Computer Configuration > Administrative Templates > System on the left pane.
- (4) Right-click Enable Persistent Time Stamp on the right pane, and then click Edit.
- (5) Check **Enable** on Enable Persistent Time Stamp screen.
- (6) Click **Apply**, and then confirm the contents and click **OK**.

The setting is now complete. Close Local Group Policy Editor.

#### (2) Server Core

Sign-in with the built-in Administrators privilege to Windows Server system which can recognize the Server Core Environment, for the following settings.

- (1) Press <Windows logo> + <R> key to start Run.
- (2) Type "mmc.exe", and then press <Enter> key. Console window is displayed.
- (3) Click Add/Remove Snap-in ... of File.
- (4) Select Group Policy Object Editor, and click Add.
- (5) Click Browse... of Select Group Policy Object window, and select Another Computer.
- (6) Input IP address or computer name, and click **OK**.
- (7) Click **OK** on Add or Remove Snap-ins window.
- (8) Click *Server Core Environment>* Policy > Computer Configuration > Administrative Templates > System on the left pane of Console window.
- (9) Right-click Enable Persistent Time Stamp on the right pane, and then click Edit.
- (10) Check **Enabled** on Enable Persistent Time Stamp screen.
- (11) Click **Apply**, and then confirm the contents and click **OK**.

The setting is now complete.

Save settings as needed, and close Console window.

# 5. Setting Up Device Drivers

Install and set up device drivers provided for the standard configuration.

For details regarding the installation and setup of a driver for an optional device, refer to the manual supplied with the optional device.

## 5.1 Installing the LAN drivers

#### 5.1.1 LAN drivers

LAN drivers are installed by applying the Starter Pack.

#### Important

Wake On LAN (WOL) is supported by NE3304-151M 1000BASE-T adapter (2ch) only.

Wake On LAN is available after installing the LAN driver.

For BIOS settings, check the "User's Guide".

#### Note

- To change the LAN driver settings, sign in to the system from a local console
  using an administrator's account. Remotely changing the settings by using the
  operating system's remote desktop feature is not supported.
- Be sure to select the Internet Protocol (TCP/IP) check box when specifying an IP address.

#### 5.1.2 Optional LAN board

This server supports the following optional LAN boards.

#### NE3304-151M/152M/157/158

When you additionally attach the optional LAN board to the target server, the corresponding LAN driver is automatically installed by Windows Plug-and-Play feature if you have attached the same controller in advance.

If not, the driver is not installed.

In that case, install the LAN drivers by the following steps.

#### NE3304-151M/152M

Note

When **Broadcom Gigabit Integrated Controller** is shown to **Programs and Features**, this step is unnecessary.

- Open command prompt, and execute the following file.
   <drive letter>:\destination folder>\winnt\drivers\02\_network\8\_ah\_04\install\_ws2019.bat
- 2. When the following message appears, restart the system.

**BCOM Driver Installation Completed!** 

When LAN board is new addition, setting each LAN board by referring to Chapter 1 (5.2 Setting up LAN drivers).

Setup is now completed.

NE3304-157/158

Note

When Intel(R) Network Connections xx.x.xx.x is shown to Programs and Features, this step is unnecessary.

- Open command prompt, and execute the following file.
   <drive letter>:\<destination folder>\winnt\drivers\02\_network\8\_ag\_04\install\_ws2019.bat
- 2. When the following message appears, restart the system.

Intel Driver Installation Completed!

3. When LAN board is new addition, setting each LAN board by referring to *Chapter 1 (5.2 Setting up LAN drivers)*.

Setup is now completed.

#### 5.1.3 Network adapter name

After installing the LAN drivers, the following network adapter names will be displayed on the Device Manager.

[NE3304-151M/152M] Broadcom NetXtreme Gigabit Ethernet #xx \*

[NE3304-157] Intel(R) Ethernet Controller X550 #xx \*

[NE3304-158] Intel(R) Ethernet Converged Network Adapter X710#xx \*

<sup>\*</sup> If there are adapters with the same name, a different identification number will be assigned to xx.

## **5.2** Setting up LAN drivers

## 5.2.1 Setting link speed

The transfer rate and duplex mode of the network adapter must be the same as those of the switching hub. Follow the procedure below to specify the transfer rate and duplex mode.

- 1. Open the **Device Manager**.
- Expand Network adapters, and then double-click the name of the network adapter you want to configure.
   The properties of the network adapter will be displayed.
- 3. On the Advanced tab, set the Speed & Duplex values to the same as those of the switching hub.
- 4. Click OK.
- 5. Restart the system.

Setup is now completed.

### 5.2.2 Configuring Flow Control

Flow Control is a feature to stop transmitting frames temporarily by sending a pause frame to the destination device when the receive buffer is about to run out. When it receives a pause frame, it regulates the transmission. Configure the Flow Control following the procedure below.

Tips

The settings of Transmit/Receive of the network adapter should match those of the destination device. For example, if Flow Control in the destination device is set as Receive only, that in the server should be set as Transmit only.

- Open the **Device Manager**.
- Expand Network adapters, and then double-click the name of the network adapter you want to configure.
   The properties of the network adapter will be displayed.
- 3. Open **Advanced** tab and click **Flow Control** to show **Value**.
- 4. The Value can be configures by the down-arrow button.
- Click **OK**.
- 6. Restart the system.

Setup is now completed.

### 5.2.3 When using NE3304-151M/152M

When using NE3304-151M/152M with the server, follow the procedure below to set it.

Execute the following file.

<drive letter>:\<destination folder>\winnt\drivers\02\_network\8\_ah\_04\pgdyavd\_disable.vbs

2. When the following message appears, click OK.

Configuration Completed
[Option:PopUp RLV Disabled(Action:<u>Done</u>)]
Reboot the system

Tips

The message "Action: Non" indicates that the LAN driver is already set.

3. Restart the system.

Setup is now completed.

# **5.3** Graphics accelerator driver

Standard graphics accelerator driver is installed automatically at the time of OS installation.

## 5.4 Using a SAS controller (NE3303-184)

The driver for SAS controller NE3303-184 is automatically installed by Windows Plug-and-Play.

# **5.5** Using Fibre Channel controller (NE3390-157A/158A)

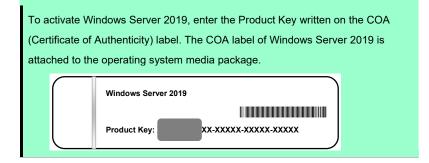

The driver for Fibre Channel controller NE3390-157A/158A is automatically installed by Windows Plug-and-Play. Driver customized for the Express5800 Series is installed by applying the Starter Pack.

However, if you additionally equip a Fibre Channel controller (NE3390-157A/158A), run the following file.

# 6. License Authentication

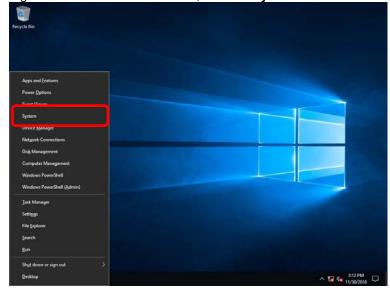

You need to activate Windows Server 2019 to use it. Follow the steps below to check if your operating system has been activated and perform the activation as needed.

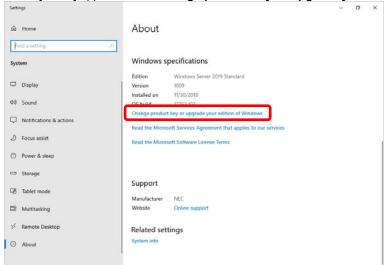

nNote

# 6.1 Desktop Experience

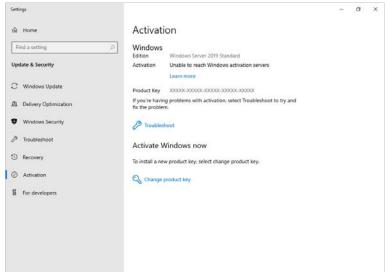

1. Right-click the left bottom of screen, and click System from the menu displayed.

2. When [About] appears, click Change product key or upgrade your edition of Windows.

3. Perform license authentication.

☐ When connected to Internet:

#### Click Change product key.

Complete license authentication process according to the message.

☐ When not connected to the Internet:

Go to Step 4.

4. Perform License Authentication via telephone.

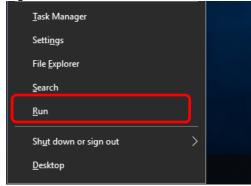

Go to the next step, which differs depending on the installation media you used.

☐ Backup DVD-ROM : Go to Step 5.

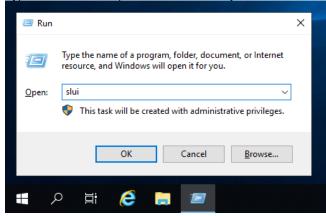

☐ Windows Server 2019 DVD-ROM

Product key <u>has been input</u>
Go to Step 8.
Product key <u>has not been input</u>
Go to Step 5.

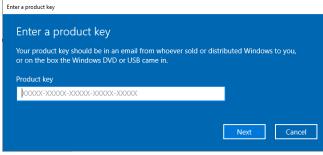

5. Right-click the left bottom of screen, and click Run from the menu displayed.

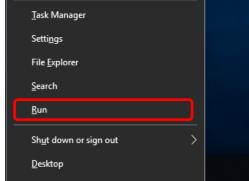

6. Type "slui", and then press the <Enter> key.

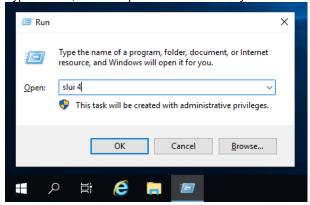

7. You need to replace product keys. Input a product key on the following screen.

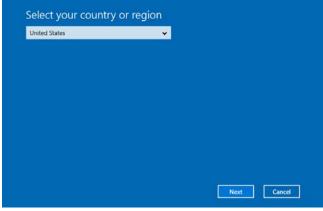

8. Right-click the left bottom of screen, and click Run from the menu displayed.

9. Type "slui 4", and then press the <Enter> key.

10. On the next screen, select your country or region, and then click **Next**.

Acquire the installation ID required for license activation.

11. Call the Microsoft license activation hotline and then tell your installation ID.

Type the acquired confirmation ID, and then click Activate Windows.

This completes authentication.

### 6.2 Server Core

1. Confirm if your license is activated.

At the command prompt, enter the following, and then press <Enter> key.

#### C:\Users\administrator>slmgr -dli

If license authentication is required, go to the next step.

If your license is already authenticated, you can skip the next and the subsequent steps.

#### 2. Change the product key.

#### When using Backup DVD-ROM:

Type the following command, and then press the <Enter> key.

C:\Users\administrator>slmgr -ipk <Product key on COA label>

#### When using Windows Server 2019 DVD-ROM:

You do not need to change the product key.

Go to the next step.

#### Perform license authentication.

#### When connected to the Internet:

License authentication is performed via the Internet.

Type the following command, and then press the <Enter> key.

#### C:\Users\administrator>slmgr -ato

This completes authentication.

#### When not connected to the Internet:

Use telephone for license authentication.

Type the following command to get an Install ID for authentication, and then press the <Enter> key.

#### C:\Users\administrator>slmgr -dti

Acquire the installation ID required for license activation.

Refer to the file systemroots system32\sppui\phone.inf to confirm the telephone number of Microsoft Licensing Center.

Call Microsoft Licensing Center and tell them your Install ID.

Type the confirmation ID you have received in the following command line, and then press the <Enter> key.

#### C:\Users\administrator>slmgr -atp <Confirmation ID>

Acquire the installation ID required for license activation.

# 7. Setup of Windows Server 2019 NIC Teaming (LBFO)

Set up the network adapter teaming feature as shown below.

# 7.1 Launching the NIC teaming setup tool

- 1. Launch Server Manager.
- 2. Select Local Server.
- 3. In the Properties window, click Enable or Disable for NIC teaming.

The NIC teaming setup tool will launch.

Tips

The NIC teaming setup tool can also be launched by opening the **Run** dialog box, typing lbfoadmin /server ., and then pressing the <Enter> key.

## 7.2 Creating a team

Create a team by using the NIC teaming setup tool.

- In the Servers section, select the name of the server to set up.
   If there is only one server connected, the name of the server is selected automatically.
- 2. In the **Teams** section, under **Tasks**, select **New Team**. The **New Team** wizard then starts.
- Type the name of the team to create, and then select the network adapter to include in the team from the Member adapters list.
- 4. Click Additional properties.
- 5. Specify the required settings, and then click OK.

#### **Teaming mode**

Static Teaming	Configures static aggregation between the NIC and switches.
Switch Independent	Configures teaming on the NIC side without depending on the switch settings.
LACP	Configures dynamic aggregation between the NIC and switches.

#### Load balancing mode

Address Hash	Distributes the load based on IP addresses and port numbers.
Hyper-V Port	Distributes the load to each of the virtual switch ports used by the virtual machines.
Dynamic	<ul> <li>Distributes the load based on IP addresses and port numbers in sending.</li> <li>Distributes the load same to "Hyper-V Port" in receiving.</li> </ul>

#### Standby adapter

Select one adapter to be set to standby mode from the adapters in the team.

Setting all adapters to active mode is also possible.

#### Primary team interface

Any VLAN ID can be specified for the primary team interface.

## **7.3** Removing a team

Remove a team by using the NIC teaming setup tool.

- In the Servers section, select the name of the server to set up.
   If there is only one server connected, the name of the server is selected automatically.
- 2. In the Teams section, select the team to remove.
- 3. In the Teams section, under Tasks, select Delete.
- 4. The message box to confirm appears, then click Delete team.

#### 7.4 Notes and restrictions

- NIC teaming on a guest OS is not supported.
- Teaming of virtual NICs on the host OS is not supported in the Hyper-V environment.
- When STP (Spanning Tree Protocol) is enabled on network switch ports to which network adapters of the team are connected, network communications may be disrupted. Disable STP, or configure "PortFast" or "EdgePort" to the ports.
  - \* About setting the network switch of the connection destination, see the manual of the network switch.
- All NICs in the team must be connected to the same subnet.
- Teaming of different speed NICs is not supported.
- Teaming of different vendor's NICs is not supported.
- When teaming is configured in a Network Load Balancing (NLB) environment, you should select multicast mode on the NLB cluster.
- When a team is removed, the following error message may be logged in the system event log.

You can safely ignore this error message.

Level	Error
Source	Microsoft-Windows-NDIS
Event ID	10317
Task Category	PnP
Description	Miniport Microsoft Network Adapter Multiplexor Driver, {xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
	xxxx-xxxx-xxxxxxxxxxxxxxxxxxxxxxxxxxxx
	Device still exists. Note that this event is provided for informational purpose
	and might not be an error always (Eg: In case of vSwitch which was recently
	un-installed or a LBFO team was removed)

- In a Windows Server Failover Cluster environment, heartbeat interruption or failover may occur if you
  configure Active-Standby teaming. To avoid this, you should configure multiple NICs in Active Mode in a
  team so that all the NICs do not fail simultaneously.
- In a Hyper-V environment, the following warning message may appear when a teaming adapter is bound to a virtual switch.

There is no problem for the operation unless this message is output multiple times at one time.

Level	Warning
Source	Microsoft-Windows-MsLbfoSysEvtProvider
Event ID	16945
Description	MAC conflict: A port on the virtual switch has the same MAC as one of the
	underlying team members on Team Nic Microsoft Network Adapter Multiplexor
	Driver

For the latest technical information, go to [Windows Server 2019 Support Information] (shown in [1.7 Downloads]).

# 8. Setup for Solving Problems

We recommend installing the following features for solving the server failure quickly.

# 8.1 Specifying Memory Dump Settings (Debug Information)

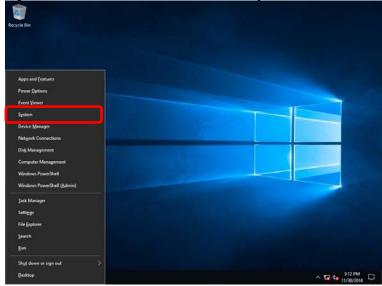

This section explains the procedures for collecting a memory dump (debug information) in the server.

#### Important

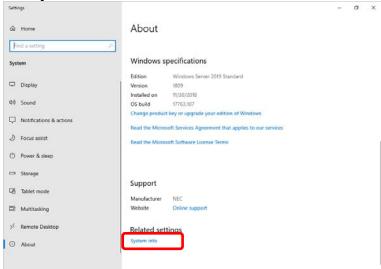

When you restart the system to save the memory dump, a message informing you that the system is short of virtual memory might appear.

Ignore this message and proceed with the restart. If you reset or restart the system again, the memory dump might not be saved normally.

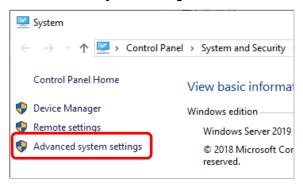

1. Right-click the left bottom of screen, and click **System** from the menu displayed.

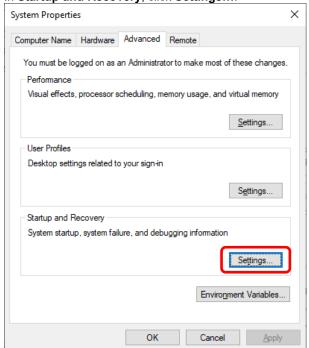

2. Click System info.

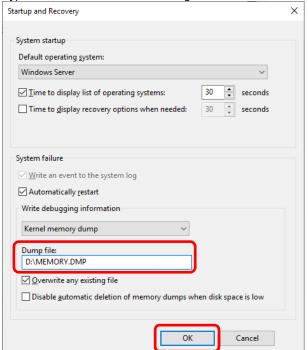

3. Click Advanced system settings.

4. In Startup and Recovery, click Settings....

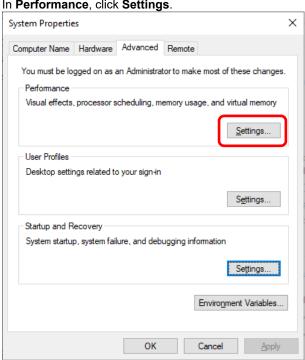

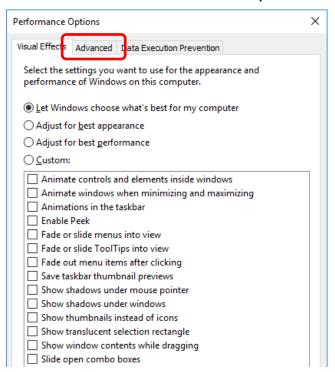

Type a file name to store the debug information in the **Dump file** text box, and then click **OK**. 5.

Note the following when specifying a dump file:

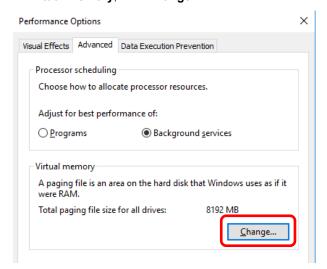

- We recommend specifying Kernel memory dump for Write debugging information.
- Specify a drive that has a free space of at least "the memory capacity mounted on the server 400MB (installed memory size + 1,100MB when the installed physical memory is 4TB or more)".
- The size of the debug information (memory dump) changes if DIMM is added. Make sure that the free space of the drive to store the debug information (memory dump) is sufficient.

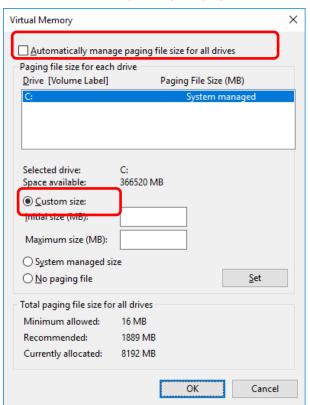

6. In Performance, click Settings. 7. Click the Advanced tab on the Performance Options window.

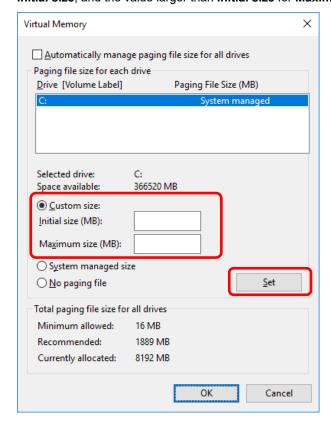

8. In Virtual memory, click Change....

9. Clear the Automatically manage paging file size for all drives check box, and then click Custom size.

 In Paging file size for each drive, enter the value equal or larger than the recommended value for Initial size, and the value larger than Initial size for Maximum size, and then click Set.

Note the following when specifying a paging file size:

- The paging file is used to collect debug information (dump file). The boot volume must have a paging file of its initial size (Total capacity of physical memory mounted + 400MB (installed memory size + 1,100MB when the installed physical memory is 4TB or more) or larger) is enough to store the dump file. Make sure to specify a sufficient paging file size.
- See "System Partition Size" in Chapter 1 (2.1 Before Starting Setup) for recommended value.
- When DIMM is added, re-specify the paging file according to the increased memory size.
- If an error occurs in setting the paging file to a drive exceeding 2TB, close [Virtual memory] and [Performance Options], and then set in the following way.
  - ex. Setting the paging file in drive C with 4096MB as Initial size, 8192MB as Maximum size.
    - 1. Start command prompt as Administrator and execute the following command.

```
wmic computersystem set AutomaticManagedPagefile=false
wmic pagefileset delete
```

- 2. Restart the Windows system.
- 3. Start command prompt as Administrator and execute the following command.

```
wmic pagefileset create name="C:\pagefile.sys"
wmic pagefileset set InitialSize=4096, MaximumSize=8192
```

4. Restart the Windows system.

#### 11. Click **OK**.

If a message to restart Windows appears, restart the system according to on-screen message.

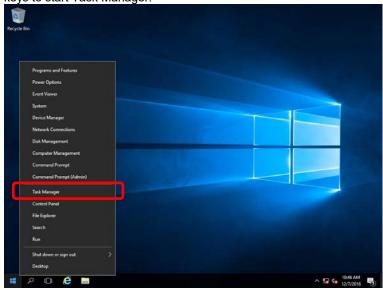

Specification of the memory dump settings is now complete.

## **8.2** How to Create a User-mode Process Dump File

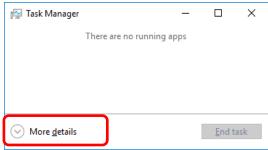

The user-mode process dump file records information when an application error occurs.

If an application error occurs, get user-mode process dump information using the following procedures without closing the pop-up window that reported the error:

Right-click an empty area of the taskbar and then click Task Manager or press <Ctrl> + <Shift> + <Esc> keys to start Task Manager.

2. Click More details

- 3. Click the Processes tab.
- Right-click the name of the process that you want to get dump information for, and then click Create Dump File.
- 5. A dump file for the process is created in the following folder:

#### C:\Users\user name\AppData\Local\Temp

**Tips** 

Get the user-mode process dump file from the folder shown in step 5.

# NEC Express5800 Series Express5800/A2040e, A1040e

# **Maintenance**

This chapter provides information for system inspection and maintenance, and how to troubleshoot the problems, which you might need to operate an Express5800 Series server.

#### 1. Failure Information

Describes how to collect the failure information. See this section in case of a failure.

#### 2. Troubleshooting

Describes how to troubleshoot the server. See this section if you suspect a failure.

#### 3. Windows System Recovery

Describes Windows recovery setup. See this section if the Windows is corrupt.

Chapter 2 Maintenance 1. Failure Information

# Failure Information

If the server is broken, you can collect failure information by using the following method.

The failure information to be described is to be collected only at the request of your sales representative.

Important

When the system restarts after a failure has occurred, a message may appear indicating virtual memory shortage. Ignore this message and proceed with starting the system. Restarting the system may result in an inability to properly dump the data.

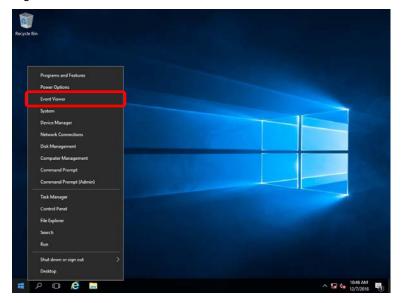

# **I.I** Collecting Event Logs

Collection for various event logs that occurred on the server follows the steps below.

Tips

If a STOP error, system error, or stall occurs, restart the system and then follow the steps below.

1. Right-click the left bottom of screen, and click Event Viewer from the menu displayed.

2. Select the type of log in Windows Logs.

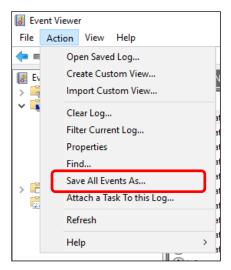

**Application** records events related to running applications.

**Security** records events related to security.

**System** records events that occur in Windows system components.

3. Click Save All Events As... from Action menu.

- 4. Type the file name of the archived log in **File name**.
- 5. Select the type of the log file you want to save in **Save as type**, and then click **Save**.

Chapter 2 Maintenance 1. Failure Information

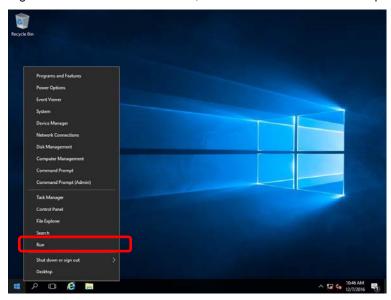

# **1.2** Collecting Configuration Information

This section describes how to collect hardware information or configuration.

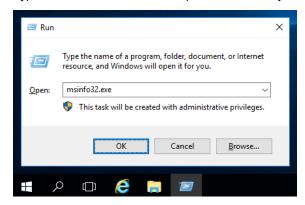

Tips

If a STOP error, system error, or stall occurs, restart the system and then follow the steps below.

1. Right-click the left bottom of screen, and click **Run** from the menu displayed.

2. Type msinfo32.exe, and then press <Enter> key.

System Information starts.

- 3. Click **Export** from **File** menu.
- 4. Type a file name to save in **File Name**, and then Click **Save**.

Chapter 2 Maintenance 1. Failure Information

## 1.3 Collecting User-Mode Process Dump

Collects diagnostic information related to application errors.

For details, see Chapter 1 (8.2 How to Create a User-Mode Process Dump File).

## **1.4** Collecting Memory Dump

If an error occurs, the dump file should be saved to acquire necessary information. You can specify any location for saving the diagnostic information. For details, see *Chapter 1 (8.1 Specifying Memory Dump Settings (Debug Information))*.

Consult with your sales representative before dumping the memory.

Dumping the memory while the server is in operating normally may affect the system operation.

Important

A message indicating insufficient virtual memory may appear when restarting the system due to an error. Ignore this message and proceed. Restarting the system may result in an inability to properly dump the data.

Chapter 2 Maintenance 2. Troubleshooting

# 2. Troubleshooting

If this system does not operate as intended, check it according to the contents of your document before sending it for repair. If an item in the checklist corresponds with a problem you are experiencing, follow the processing instructions.

## 2.1 Problem of Using Internal Devices and Other Hardware

#### [?] Flow Control of LAN controller

→ When the Flow Control is set as Auto Negotiation, Rx & Tx Enabled, Tx Enabled or Transmit Enabled, Receive & Transmit Enabled in case that the packet processing of the operating system stops due to some factors, such as a system hang, with a high transmission load, pause frames may be sent continuously.

In this case, the buffer in the switch runs out because a large amount of packets is stored in the switch, which may affect all the telecommunication devices connected to the server. To avoid this, set the Flow Control as **Disabled**.

# 3. Windows System Recovery

Recover the Windows system by using the following instructions if the system does not work normally.

Note

- After recovering Windows, install drivers and the Starter Pack referring to Chapter 1 (5. Setting Up Device Drivers) and Chapter 1 (3. Applying Starter Pack)
- If hard disk drives cannot be detected, you cannot recover the Windows system.

# 3.1 Recovery of Windows Server 2019

If the Windows does not start normally, you can recover it using the feature of the Windows installation disc.

To run this feature, start the installation disc, and then choose Repair your computer in Windows Setup wizard.

We recommend that this option is performed by the system administrator.

# NEC Express5800 Series Express5800/A2040e, A1040e

# **Appendix**

#### 1. List of Windows Event Logs

Shows a list of Windows event logs.

# List of Windows Event Logs
