Introduction

Thank you for purchasing our product.

When using the **EXPRESSBUILDER E8.10-010.03 (3.76.2)**, see this manual before installing Windows. Please read carefully the instructions and keep this document for your future reference.

Conventions Used in This Document

Notations used in the text

The symbols used in this document include the following:

Important	Indicates critical items that must be followed when handling hardware or operating software. If the procedures described are not followed, hardware failure, data loss, and other serious malfunctions could occur .
Note	Indicates items that must be confirmed when handling hardware or operating software.
Tips	Indicates information that is helpful to keep in mind when using this server.

Optical disk drive

This server is equipped with one of the following drives. These drives are referred to as *optical disk drive* in this document.

- DVD-ROM drive
- DVD Super MULTI drive

Hard disk drive

Unless otherwise stated, hard disk drive described in this document refer to the following.

- Hard disk drive (HDD)
- Solid state drive (SSD)

Removal Media

Unless otherwise stated, removal media described in this document refer to both of the following.

- USB Memory
- Flash FDD

Abbreviations of Operating Systems

Windows Operating Systems are referred to as follows.

See Chapter 1 (1.2 Supported Windows OS) for detailed information.

Notations in this document	Official names of Windows
Windows Server 2016	Windows Server 2016 Standard
Windows Server 2010	Windows Server 2016 Datacenter

About description of model names

The following models are supported by this document. If not mentioned especially, the contents is for all models. When the contents differs by model, each contents are described with model name.

Supported model is as follows.

Express5800/R120i-1M Express5800/R120i-2M Express5800/R120h-1M, R120h-1M (2nd-Gen), R120h-1M (3rd-Gen) Express5800/R120h-2M, R120h-2M (2nd-Gen), R120h-2M (3rd-Gen) Express5800/R120h-1E Express5800/R120h-2E Express5800/T120h Express5800/R110j-1

Trademarks

Microsoft, Windows, and Windows Server are registered trademarks or trademarks of Microsoft Corporation in the United States and other countries.

Intel, Pentium, and Xeon are registered trademarks of Intel Corporation of the United States.

Broadcom, NetXtreme, LiveLink, Smart Load Balancing are registered trademarks or trademarks of the Broadcom Corporation in the U.S. and other countries.

All other product, brand, or trade names used in this publication are the trademarks or registered trademarks of their respective trademark owners.

NEC Express5800 Series

Installing Windows

This manual explains the setup procedure for a physical environment. Read through this chapter to set up the Windows correctly.

1. Information of Windows Installation

Describes Supported Windows OS and mass storage controllers which is supported by EXPRESSBUILDER/Starter Pack.

- Flow of Windows Installation
 Describes the flow chart of Windows installation.
- Installing Windows Server 2016
 Describes how to install Windows Server 2016.
- Setting up for Maintenance
 Describes the features that should be set up for maintenance in advance.

5. Backup of system information

Describes how to back up the setting information of the system in advance of troubles.

I. Information of Windows Installation

This section describes the points of using EXPRESSBUILDER/Starter Pack to install Windows operating system.

Important

The product key on the Certificate of Authenticity (COA) label is necessary information when authenticate the license. Scrape off with a coin or the like lightly the scratch that covers a part of the product key. When you scrape, be careful not to break the part that the product key is printed on.

The label cannot be reissued if it is lost or stained. It is recommended to write down the product key and keep it with other accessories.

Refer to the following for the installation of virtual OS.

If your virtualization infrastructure is Hyper-V:

Refer to the following web site for the Hyper-V setting and the installation procedure of the guest OS and so on.

https://www.58support.nec.co.jp/global/download/w2016/hyper-v/hyper-v-ws2016.html

If your virtualization infrastructure is not Hyper-V:

Refer to the manual provided by virtualization infrastructure vendor to prepare the virtual environment.

Prepare a media or an ISO image of the OS to install.

- 1. Start the virtual machine from a media or an ISO image of the OS to install.
- 2. Follow the on-screen instruction to complete the OS installation.
- Refer to the manual provided by virtualization infrastructure vendor to install the necessary services and applications.

I.I Starting EXPRESSBUILDER

Use EXPRESSBUILDER to reconfigure RAID arrays or re-install the OS.

For details, see Chapter 2 (3. Details of EXPRESSBUILDER) in Maintenance Guide or Chapter 1 (4. Details of EXPRESSBUILDER) in Maintenance Guide (Common).

<u>Usage</u>

Remove a CD/DVD and removable media from the server, restart the server and press <F10> key (EXPRESSBUILDER) during POST.

1.2 Supported Windows OS

You can install the following editions of Windows operating system.

: Manual installation

Name of Windows OS		Boot	mode	Installation method		
		UEFI	Legacy	EB	OS	
Windows Server 2016 *	Standard	~	N/A	~	~	
Windows Server 2016	Datacenter	~	N/A	\checkmark	~	

✓ : Supported

* "Nano Server" is not supported.

1.3 Supported Mass Storage Controllers

The table below lists the controllers for this server, supported by EXPRESSBUILDER/Starter Pack.

If a controller not mentioned below is connected, set it up while referring to the instructions supplied with the controller.

(1) Express5800/R120i-1M, R120i-2M

	R120i-1M	R120i-2M

3. Installing Windows Server 2016

3.1 Precautions of Windows Server 2016 Installation

Read the precautions explained this section before installing.

: Rapid Setup

: Manual Installation

BIOS	6 settir	ng	
_	EB	OS	Change Boot Mode to UEFI Mode . For details, see <i>Chapter 2 (1. System Utilities)</i> in <i>Maintenance Guide</i> .
			System Configuration > BIOS/Platform Configuration (RBSU) > Boot Options > Boot Mode > UEFI Mode
-	EB	OS	Select Enabled for x2APIC feature of processor. For details, see <i>Chapter 2 (1. System Utilities)</i> in <i>Maintenance Guide.</i>
			System Configuration > BIOS/Platform Configuration (RBSU) > Processor Options > Processor x2APIC Support > Enabled
_	EB	OS	R120h-1M, R120h-2M, R120h-1E, R120h-2E, T120h Change time zone to the Unspecified Time Zone. For details, see <i>Chapter 2 (1. System Utilities)</i> in <i>Maintenance Guide</i> .
			System Configuration > BIOS/Platform Configuration (RBSU) > Date and time > Time Zone : Unspecified Time Zone
-	EB	OS	R120h-1M, R120h-2M, R120h-1E, R120h-2E, T120h Change time format to the Local Time. For details, see <i>Chapter 2 (1. System Utilities)</i> in <i>Maintenance Guide</i> . System Configuration > BIOS/Platform Configuration (RBSU) > Date and time > Time Format : Local Time
_	EB	08	R120i-1M/R120i-2M, R120h-1M(2nd-Gen)/(3rd-Gen)/(3rd-Gen), R110j-1 Change time format to the Coordinated Universal Time (UTC). For details, see Chapter 1 (1. System Utilities) in Maintenance Guide (Common). System Configuration > BIOS/Platform Configuration (RBSU) > Date and time > Time Format : Coordinated Universal Time (UTC)
_	EB	08	R120i-1M/R120i-2M, R120h-1M(2nd-Gen)/(3rd-Gen), R120h-2M(2nd-Gen)/(3rd-Gen), R110j-1 Change time zone to the Set arbitrary time zone. For details, see Chapter 1 (1. System Utilities) in Maintenance Guide (Common). System Configuration > BIOS/Platform Configuration (RBSU) > Date and time > Time Zone : Set arbitrary time zone

г

	ЕВ	05	If your system has 64 or more logical CPU per 1 processor, set one of the following settings. For details, see <i>Chapter 1 (1. System Utilities)</i> in <i>Maintenance Guide (Common)</i> . If [Sub-NUMA Clustering] is [Disabled] System Configuration > BIOS/Platform Configuration (RBSU) > Memory Options > Virtual NUMA > [Enabled] If [Sub-NUMA Clustering] is [Enable SNC2 (2-clusters)] *
			System Configuration > BIOS/Platform Configuration (RBSU) > Memory Options > Virtual NUMA > [Disabled]
			* Sub-NUMA Clustering depends on hardware configuration. For hardware configurations where this feature is not available, set according to the case of setting [Disabled]. For details, see Chapter 1 (1. System Utilities) in Maintenance Guide (Common).
Hardv	vare c	onfig	uration
			The following hardware configurations require special procedures.
	EB	08	Installation When Multiple Logical Drives Exist If you select wrong hard disk drive in Windows Server 2016 installation, the setup may erase existing data unexpectedly. Refer to displayed disk capacity or partition size to find target hard disk drive.
	EB	08	Reinstalling to a mirrored volume When you install Windows Server 2016 in an environment with a mirrored volume created using Windows, disable mirroring before installing the operating system and enable it again after the installation. Use [Computer Management] – [Disk Management] to create, disable, or remove the mirrored volume.
	EB	08	Peripherals such as RDX Remove a RDX device before installing. Some peripherals need to be halted before installation. Refer to the manual provided with the peripherals for how to set a device appropriate to installation.
	EB	08	DAT, LTO, and similar media Do not set media that is unnecessary to installation during setup.
	EB	08	Reinstalling to dynamic disks If the hard disk drive has been upgraded to a dynamic disk, the Windows cannot be reinstalled to it with the existing partitions. Install Windows with Manual Installation.

Installation Guide (Windows Server 2016)

1.1	Example of incorrect setting 1
	C : Paging file whose size is smaller than the installed memory size D : Paging file whose size is "installed memory size + 400 MB* " or more
	→ The paging file in drive C is used for collecting memory dump, but collection may fail because the size of the paging file is smaller than the installed memory size.
	Example of incorrect setting 2
	C : Paging file whose size is "installed memory size x 0.5" D : Paging file whose size is "installed memory size x 0.5 E : Paging file whose size is 400 MB*
	→ The total paging file size in all drives is "installed memory size + 400 MB* ", but collection may fail because only the paging file in drive C is used for collecting memory dump.
	Example of incorrect setting 3
	C : No paging file exists D : Paging file whose size is "installed memory size + 400 MB* " or more (in dynamic volume)
	→ Paging files in a dynamic volume cannot be used for collecting memory dump. Thus, collecting memory dump fails.
ן - י	This value is installed memory size +1,100 MB when the installed memory size is 4 TB or more

Dedicated Dump File cannot be placed in dynamic volumes.

System	partition	size	
ЕВ	B OS	The system partition size can be calculated	by using the following formula.
		Size required to install the OS + paging fil	e size + dump file size + application size
		Desktop Experience	
		Size required to install the OS	= 15,200 MB
		Paging file size (recommended)	= installed memory size x 1.5
		Dump file size	 installed memory size + 400MB (installed memory size is 4 TB or less) installed memory size + 1,100MB (installed memory size is exceeding 4 TB)
		Application size	= as required by the application
		Server Core	
		Size required to install the OS	= 10,300MB
		Paging file size (recommended)	= installed memory size x 1.5
		Dump file size	 installed memory size + 400MB (installed memory size is 4 TB or less)
			 installed memory size + 1,100MB (installed memory size is exceeding 4 TB)
		Application size	= as required by the application
		partition size is calculated as follows: 15,200MB + (2,048MB x 1.5) + 2,048MI = 20,820MB	
		The above mentioned partition size is the m Ensure that the partition size is sufficient for	ninimum partition size required for system installation. r system operations.
		The following partition sizes are recommend	ded.
		Desktop Experience : 32,76	68MB(32GB) or more
		Server Core : 32,76 *1GB = 1,024MB	S8MB(32GB) or more
		 information (dump file). The must be large enough to some source you set a suffice there will be a virtual memory collect correct debug infor Regardless of the sizes of maximum size of the dump memory size + 1,100 MB was supported as a support of the size of the s	tient paging file size. If the paging file is insufficient, nory shortage that may result in an inability to mation. internal memory and write debug information, the o file is "installed memory size + 400 MB (installed when installed memory size is 4 TB or more)". lications or other items, add the amount of space

3.2 Rapid Setup

This section describes how to install Windows Server 2016 with Rapid Setup .

Important
Setup will delete all data of the hard disk drive.
Disconnect hard disk drives from the RAID controller that is not to be setup.

3.2.1 Setup flow

Start
3.1 Precautions of Windows Server 2016 Installation
3.2 Rapid Setup
3.4 Standard Program Package Installation
3.5 Setup of Device Drivers
3.6 License Authentication
3.7 Setup of Windows Server 2016 NIC Teaming (LBFO)
3.8 Installing Applications
4 Setting up for Maintenance
5 Backup of system information
End of Rapid Setup

3.2.2 Requirements for Setup

Prepare the following media and instruction manuals before starting setup.

- > Either of the following OS installation media
 - NEC operating system installation media (hereafter referred to as Backup DVD-ROM)
 - Microsoft operating system installation media (hereafter referred to as Windows Server 2016 DVD-ROM)
- Starter Pack
 - Starter Pack DVD (Optional or downloading from our website)
 - → The Starter Pack which supports Windows Server 2016 is "S8.10-010.04" or later. Download it from Web site.

3.2.3 Installation procedure

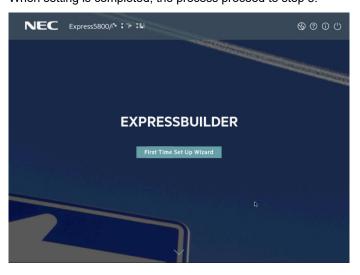

Note

Read the precautions in *Chapter 1 (3.1 Precautions of Windows Server 2016 Installation)* in advance.

- 1. Turn on peripherals (such as a display), and then turn on the server.
- 2. To run EXPRESSBUILDER, press <F10> key during POST.

Tips

When you configure RAID system from EXPRESSBUILDER, the system reboots automatically after clicking **Accept Configuration**. After reboot, EXPRESSBUILDER starts automatially and resumes from the next procedure. Wait a moment without any operation.

Confirm the settings and specify any required settings.

OS Setting

- On the following "Operating System", specify settings for the OS installation.
- Password can be used alphanumeric characters only.
 If a sign (such as "!") is included, an error message will appear.
- Set your time zone.
- You can enable the functions of Windows, if necessary.

Install the HyperV role on this system	The HyperV role can be Enabled.	
Enable Windows Firewall	Windows Firewall can be Enabled.	

Storage controller

• Choose the RAID controller of installation destination.

When you connect multiple cage of hard disk drive, a part of information of box may not be displayed. This event does not affect system operation.

Partition of the OS volume

- Specify the any partition size, and then remove the choice of **Use Recommended Partition**. Enter the partition size of Basic data partition to installation destination (Unit: MB *), or specify it with percentage. The following partitions cannot be changed.
 - Recovery

Tips

- EFI system partition
- Microsoft reserved partition

- When not choosing Use Recommended Partition, the OS is installed using all area of a hard disk drive.
- Select hard disk drive (logical drive) to install OS.

ImportantYou can confirm name of hard disk drives (e.g.: Logical Drive 1) from
"Storage controllers" setting screen.
If you select wrong hard disk drive as OS destination drive(logical drive),
existing data may be cleared unexpectedly.
Be careful when you select hard disk drive for installation.

Firmware Update

3.3.2 Requirements for Setup

Prepare the following media and instruction manuals before starting setup.

- > Either of the following OS installation media
 - NEC operating system installation media (hereafter referred to as Backup DVD-ROM)
 - Microsoft operating system installation media (hereafter referred to as Windows Server 2016 DVD-ROM)
- Starter Pack
 - Starter Pack DVD (Optional or downloading from our website)
 - $\rightarrow\,$ The Starter Pack which supports Windows Server 2016 is "S8.10-010.04" or later. Download it from Web site.

Note

3.3.3 Installation procedure

Note

Read the precautions in *Chapter 1 (3.1 Precautions of Windows Server 2016 Installation)* in advance.

- Turn on peripherals (such as a display), and then turn on the server. Insert OS installation media into the drive.
- To run EXPRESSBUILDER, press <F11> key during POST.
 On the **One-Time Boot Menu**, select the optical disk drive in which the OS installation media was inserted.
- 3. The system starts from the OS installation media

he message "Press any key to boot from CD or DVD..." is displayed on the upper of the screen. Press the <Enter> key to start from the media.

Note

If the Windows Setup screen (the screen in the next step) does not display, the <Enter> key was not properly pressed. Turn the system power on again, and then start again.

4. Click Next.

	Stop running this script?
	A script on this page is causing your web browser to run slowly. If it continues to run, your computer might become unresponsive.

8. Windows Server 2016 restarts automatically.

Then, remove the Starter Pack DVD.

SPP installation is now complete.

5.

3.4.2 Installing Standard Program Package on Server Core

- 1. Sign-in to the Windows with an Administrators privilege.
- 2. Set the Starter Pack DVD to the drive.
- 3. From the command prompt, type the following command.

In the example below, the optical disk drive is the D drive.

cd /d D:\software\010\win\seamless

C:\Users\administrator>cd /d D:\software\010\win\seamless

4. Type the following command, and then press <Enter> key.

instcmd.vbs spp /s

	×
Starter Pack DVD, you can in Package(SPP) by using this f	e updating the BIOS/FW included ones failing to boot.
	OK Cancel
Note	 After installing a standard program package, the following message displays and refers to <i>chapter 2 (2.1 Problem of OS)</i>. An error occurred during installing the Standard Program Package. To handle this error, refer to troubleshooting of Installation Guide (Windows) according to your Starter Pack version. (Code:) Click [OK] to restart the computer. If the Starter Pack disc is inserted, click [OK] and then remove it.

iLO may be reset during applying Standard Program Package.
 If iLO is reset, iLO remote console and iLO virtual media is disconnected.
 When iLO remote console and iLO virtual media is disconnected, connect again after 30 seconds or more.

6. Click OK.

7. After removing the Starter Pack DVD, restart Windows Server 2016 manually.

SPP installation is now complete.

Setup of Device Drivers 3.5

Install and set up device drivers provided for the standard configuration of the server.

For details regarding the installation and setup of a driver for an optional device, refer to the manual supplied with the optional device.

3.5.1 Installing the LAN drivers

(1) LAN drivers

The drivers are installed by Standard Program Package.

Important	Wake On LAN (WOL) is supported by onboard network adapters and
	N8104-171/172/173/175/193/194/195/206/207/208/213/217 only. Wake On LAN
	is available after installing the LAN driver.
	For Wake On LAN of R120h-1E / R120h-2E / T120h onboard network
	adapters and N8104-172/175/193/194/195/206/208, when using Wake On LAN
	see Chapter 1 (3.5.2 Setting up LAN drivers - (3) Setting up Wake on LAN).
	BIOS settings, check Maintenance Guide.
Note	To change the LAN driver settings, sign in to the system from a local console

To change the Erry anter counge, sign in to the system norm a robal concere
using an administrator's account. Remotely changing the settings by using the
operating system's remote desktop feature is not supported.
Choose the Internet Protocol (TCP/IP) check box when specifying an IP
addraaa

(2) Optional LAN board

This server supports the following optional LAN boards.

R120i-1M R120i-2M	N8104-206/207/208/209/210/211/212/217/219
R120h-1M R120h-1M (2nd-Gen) R120h-2M R120h-2M (2nd-Gen)	N8104-171/172/173/175/176/177/178/179/180/181/182/183/184/185/186/187
R120h-1M (3rd-Gen) R120h-2M (3rd-Gen)	N8104-172/175/178/179/180/181/182/183/184/185/186/187/213/215
R120h-1E R120h-2E	N8104-171/172/173/175/176/177/178/179/180/181/182/183/184/185/186/187/ 193/194/195
T120h	N8104-178/179/180/181/182/183/184/185/186/187
R110j-1	N8104-171/172/173/176/178/179/180/181/182/183/185/186

If you install the LAN boards after installing Standard Program Package, install Standard Program Package again according to Chapter 1 (3.4 Standard Program Package Installation).

(3) Network adapter name

After installing the LAN drivers, the following network adapter names will be displayed on the Device Manager.

- Network adapters for the standard configuration

R120h-1M R120h-1M (2nd-Gen) R120h-2M R120h-2M (2nd-Gen)	HPE Ethernet 1Gb 4-port 331i Adapter #xx(*1)
R120h-1E R120h-2E	HPE Ethernet 1Gb 2-port 368i Adapter #xx(*1)
T120h	HPE Ethernet 1Gb 4-port 369i Adapter #xx(*1)
R110j-1	HPE Ethernet 1Gb 2-port 332i Adapter #xx(*1)

- If connecting with an optional LAN board:

N8104-171	HPE Ethernet 1Gb 4-port 331FLR Adapter #xx(*1)
N8104-172	HPE Ethernet 1Gb 4-port 366FLR Adapter #xx(*1)
N8104-173	HPE FlexFabric 10Gb 2-port 533FLR-T Adapter #xx(*1)
N8104-175	HPE Ethernet 10Gb 2-port 562FLR-T Adapter #xx(*1)
N8104-176	Port1 : HPE Ethernet 10Gb 2-port 562FLR-SFP+ Adapter #xx(*1)
	Port2 : HPE Ethernet 10Gb 562SFP+ Adapter #xx(*1)
N8104-177	HPE Ethernet 10/25Gb 2-port 622FLR-SFP28 Converged Network Adapter #xx(*1)
N8104-178	HPE Ethernet 1Gb 2-port 332T Adapter #xx(*1)
N8104-179	HPE Ethernet 1Gb 4-port 331T Adapter #xx(*1)
N8104-180	HPE Ethernet 1Gb 2-port 361T Adapter #xx(*1)
N8104-181	HPE Ethernet 1Gb 4-port 366T Adapter #xx(*1)
N8104-182	HPE Ethernet 10Gb 2-port 530T Adapter #xx(*1)
N8104-183	HPE Ethernet 10Gb 2-port 521T Adapter #xx(*1)
N8104-184	HPE Ethernet 10Gb 2-port 562T Adapter #xx(*1)
N8104-185	HPE Ethernet 10Gb 2-port 530SFP+ Adapter #xx(*1)
N8104-186	Port1 : HPE Ethernet 10Gb 2-port 562SFP+ Adapter #xx(*1)
	Port2 : HPE Ethernet 10Gb 562SFP+ Adapter #xx(*1)
N8104-187	HPE Ethernet 10/25Gb 2-port 621SFP28 Adapter #xx(*1)
N8104-193	HPE Ethernet 1Gb 2-port 368FLR-MMT Adapter #xx(*1)
N8104-194	HPE Ethernet 10Gb 2-port 568FLR-MMSFP+ Adapter #xx(*1)
N8104-195	HPE Ethernet 10Gb 2-port 568FLR-MMT Adapter #xx(*1)
N8104-206	Intel(R) Ethernet Network Adapter I350-T4 for OCP NIC 3.0 #xx(*1)
N8104-207	Marvell FastLinQ Ethernet 10Gb 2-port BaseT QL41132HQRJ OCP3 Adapter #xx(*1)
N8104-208	Intel(R) Ethernet Network Adapter E810-XXV-2 for OCP 3.0 #xx(*1)
N8104-209	Intel(R) Ethernet Server Adapter I350-T4 #xx(*1)
N8104-210	Marvell FastLinQ Ethernet 10Gb 2-port BaseT QL41132HLRJ Adapter #xx(*1)
N8104-211	Marvell FastLinQ Ethernet 10/25Gb 2-port SFP28 QL41232HLCU Adapter #xx(*1)
N8104-212	Intel(R) Ethernet Network Adapter E810-XXV-2 #xx(*1)
N8104-213	HPE Ethernet 10Gb 2-port 535FLR-T Adapter #xx(*1)

- N8104-215 HPE Ethernet 10Gb 2-port 535T Adapter #xx(*1)
- N8104-217 Broadcom NetXtreme E-Series Dual-port 10GBASE-T Ethernet OCP 3.0 Adapter #xx(*1)
- N8104-219 Broadcom P210tep NetXtreme-E Dual-port 10GBASE-T Ethernet PCIe Adapter #xx(*1)

*1: If there are adapters with the same name, a different identification number will be assigned to xx.

 Tips
 The ID for N8104-173/177/182/183/185/187/207/210/211 might be a number of two or more digits. This is due to the LAN driver specifications and not an error. This number cannot be changed.

The network adapter name displayed in the device manager may be different from the one listed above.

In this case, the correct network adapter name can be displayed by following the procedure below.

- 1. Start Device Manager.
- 2. Open **Network Adapters**, right click on the relevant adapter, and select **Delete**.
- Do not check the **Delete the driver software of this device** checkbox.
- 3. Select Scan hardware change from Control.

3.5.2 Setting up LAN drivers

(1) Setting link speed

The transfer rate and duplex mode of the network adapter must be the same as those of the switching hub. Follow the procedure below to specify the transfer rate and duplex mode.

ImportantIf you are using a network adapter for N8104-213/215/217/219, changing the
setting is not supported of "Speed & Duplex".
Use int the "Auto Negotiation" of default value.

Tips

Tips

If you are using a network adapter for N8104-177/185/187, the network adapter settings can be set to "10 Gbps Full Duplex" or "25 Gbps Full Duplex", and the connected switching hub settings can be set to "Auto Negotiation".

- 1. Open the Device Manager.
- Expand Network Adapters, and then double-click the name of the network adapter you want to configure. The properties of the network adapter will be displayed.
- 3. On the Advanced tab, set the Speed & Duplex values to the same as those of the switching hub.

Tips

When using the N8104-177/183/187/207/210/211, Link control set to Driver controlled. *When Link control is Preboot controlled, link speed setting of BIOS take a priority.

- 4. Click OK in the Network Adapter Properties dialog box.
- 5. Restart the system.

The link speed setting is now complete.

(2) Configuring Flow Control

Flow Control is a feature to stop transmitting frames temporarily by sending a pause frame to the destination device when the receive buffer is about to run out. When it receives a pause frame, it regulates the transmission. Configure the Flow Control following the procedure below.

Tips

The settings of Flow Control of the network adapter should match those of the destination device. For example, if Flow Control in the destination device is set as Enabled, that in the network adapter should be set as Enabled.

- 1. Open the **Device Manager**.
- Expand Network Adapters, and then double-click the name of the network adapter you want to configure. The properties of the network adapter will be displayed.
- 3. Open Advanced tab, click Flow Control to show Value.
- 4. The Value can be changed by the down-arrow button.
- 5. Click **OK**, and then restart the system.

The Flow Control setting is now complete.

(3) Setting up Wake on LAN

- When using R120h-1E / R120h-2E / T120h onboard network adapters and N8104-172/175/193/194/
 195/206/208 with the server, follow the procedure below to set it.
 - 1. Open the **Device Manager**.
 - 2. Expand **Network Adapters**, and then double-click the name of the network adapter you want to configure.

The properties of the network adapter will be displayed.

- 3. Open Advanced tab, click Enable PME to show Value.
- 4. Change the value to **Enabled** by the down-arrow button.
- 5. Click **OK**, and then restart the system.

Setup is now complete.

- When not using Wake On LAN on the N8104-208, be sure to follow the procedure below to set it.
 - 1. Start the system.
 - 2. Press the <F9> key during the startup process to access System Utility.
 - Enter the System Configuration, select the LAN controller to set Wake On LAN.
 In the case of this product, it is the following name.

 - OCP Slot 10 Port 2 : Intel(R) Ethernet Network Adapter E810-XXV-2 for OCP 3.0 xx:xx:xx:xx:xx:xx:xx
 - 4. Select NIC Configuration, set the Wake On LAN to Disabled.
 - Select F12: Save and Exit, and select OK or Yes Save Changes.
 When the Reboot button appears, press <Enter> to restart the system.
 Setup is now complete.

3.5.3 Using Graphics Accelerator

For installation with the Rapid Setup or Manual installation, the drivers are installed by Standard Program Package.

If you install the Graphics Accelerator driver after installing Standard Program Package, install Standard Program Package again according to *Chapter 1 (3.4 Standard Program Package Installation)*.

3.5.4 Using SAS Controller (N8103-197)

For installation with the Rapid Setup or Manual installation, the drivers are installed by Standard Program Package.

If you install the SAS controller (N8103-197) after installing Standard Program Package, install driver by following steps.

- 1. Insert the Starter Pack DVD into the optical disk drive.
- 2. Run the \packages\cp049387.exe on the DVD to install the driver.
- 3. After installing driver, restart the server.

3.5.5 Using RAID Controller (N8103-189/190/191/192/193/194/195/196/201/237/238)

For installation with the Rapid Setup or Manual installation, the drivers are installed by Standard Program Package.

If you install the RAID controller (N8103-189/190/191/192/193/194/195/196/201/237/238) after installing

Standard Program Package, install driver by following steps.

- 1. Insert the Starter Pack DVD into the optical disk drive.
- 2. Run the \packages\cp049387.exe on the DVD to install the driver.
- 3. After installing driver, restart the server.

3.5.6 Using Fibre Channel Controller (N8190-163/164/165/166/171/172)

For installation with the Rapid Setup or Manual installation, the drivers are installed by Standard Program Package.

If you install the Fibre Channel controller (N8190-163/164/165/166/171/172) after installing Standard Program Package, install Standard Program Package again according to *Chapter 1 (3.4 Standard Program Package Installation)*.

3.6 License Authentication

To use Windows Server 2016, you need finish the license authentication procedure.

Confirm if the license is authenticated or not in the next step.

Note

To activate Windows Server 2016, enter the Product Key written on the COA (Certificate of Authenticity) label. The COA label of Windows Server 2016 is attached to the operating system media package.

3.6.1 Desktop Experience

1. Right-click the lower left of the screen, and click System from the menu displayed.

Recycle Bin	
Apps and <u>F</u> eatures Power <u>O</u> ptions	
System	
Device <u>M</u> anager Net <u>w</u> ork Connections

0000000	0000000	0000000	0000000	0000000	0000000	0000000	0000000	000000
						Enter conf	irmation l	DCancel

12. Call the Microsoft license activation hotline and then tell your installation ID.

Type the confirmation ID, and then click Activate Windows.

		firmatio		enter.				
А	В	с	D	E	F	G	н	
					Activate Wi	ndows	Cancel]

The authentication is now complete.

3.6.2 Server Core

1. Confirm if your license is activated.

At the command prompt, type the following command, and then press <Enter> key.

C:¥Users¥administrator>**slmgr-dli**

When license authentication is required, go to the next step.

When your license is already authenticated, you can skip the next and the subsequent steps.

2. Change the product key.

Using Backup DVD-ROM:

Type the following command, and then press <Enter> key.

C:¥Users¥administrator>Slmgr -ipk <Product key on COA label>

Using Windows Server 2016 DVD-ROM:

You do not need to change the product key.

Go to the next step

3. Perform license authentication.

The server connects to the Internet:

License authentication is performed via the Internet.

Type the following command, and then press <Enter> key.

C:¥Users¥administrator>slmgr -ato

This completes authentication.

The server does not connect to the Internet:

Use telephone for license authentication.

Type the following command to get an Install ID for authentication, and then press <Enter> key.

C:\Users\administrator>slmgr -dti

Acquire the installation ID required for license activation.

Refer to the file <code>%systemroot%\system32\sppui\phone.inf</code> to confirm the telephone number of Microsoft Licensing Center.

Call Microsoft Licensing Center and tell them your Install ID.

Type the confirmation ID you have received in the following command line, and then press <Enter> key.

C:\Users\administrator>slmgr -atp <Confirmation ID>

The authentication is now complete.

3.7 Setup of Windows Server 2016 NIC Teaming (LBFO)

Set up the network adapter teaming feature as shown below.

3.7.1 Launching the NIC teaming setup tool

- 1. Launch Server Manager.
- 2. Select Local Server.
- 3. In the Properties window, click Enable or Disable for NIC teaming.

The NIC teaming setup tool will launch.

Tips

The NIC teaming setup tool can also be launched by opening the **Run** dialog box, typing "lbfoadmin /server .", and then pressing <Enter> key.

3.7.2 Creating a team

Create a team by using the NIC teaming setup tool.

- In the Servers section, select the name of the server to set up.
 If there is only one server connected, the name of the server is selected automatically.
- 2. In the Teams section, under Tasks, select New Team. The New Team wizard then starts.
- 3. Type the name of the team to create, and then select the network adapter to include in the team from the **Member adapters** list.
- 4. Click Additional properties.
- 5. Specify the required settings, and then click OK.

Teaming mode

Static Teaming	Configures static aggregation between the NIC and switches.
Switch Independent	Configures teaming on the NIC side without depending on the switch settings.
LACP	Configures dynamic aggregation between the NIC and switches.

Load balancing mode

Address Hash	Distributes the load based on IP addresses and port numbers.
Hyper-V Port	Distributes the load to each of the virtual switch ports used by the virtual machines.
Dynamic	• Distributes the load based on IP addresses and port numbers in sending.
	Distributes the load same to "Hyper-V Port" in receiving.

Standby adapter

Select one adapter to be set to standby mode from the adapters in the team.

Setting all adapters to active mode is also possible.

Primary team interface

Any VLAN ID can be specified for the primary team interface.

3.7.3 Notes and restrictions

- NIC teaming on a guest OS is not supported.
- Teaming of virtual NICs on the host OS is not supported in the Hyper-V environment.
- When STP (Spanning Tree Protocol) is enabled on network switch ports to which network adapters of the team are connected, network communications may be disrupted. Disable STP, or configure "PortFast" or "EdgePort" to the ports.
 - * About setting the network switch of the connection destination, see the manual of the network switch.
- All NICs in the team must be connected to the same subnet.
- Teaming of different speed NICs is not supported.
- Teaming of different vendor's NICs is not supported.
- When teaming is configured in a Network Load Balancing (NLB) environment, you should select multicast mode on the NLB cluster.

Refer to the following website for the latest information.

https://www.58support.nec.co.jp/global/download/w2016/index.html

- [Technical Information] - [NIC Teaming (LBFO)]

3.8 Installing Applications

Some applications included in Starter Pack can be installed easily by performing the procedures described below. When installing these applications individually, see *the manual of each applications*. This feature is <u>only</u>

```
available on Desktop Experience.
```

System reboot is required after installing applications.

Application can install using iLO remote console and iLO virtual media.

Tips

This function supports clean installation of applications only. If you re-install installed application, refer to *the manual of each applications*.

- 1. Sign-in to the Windows with an Administrators privilege.
- 2. Insert the Starter Pack DVD into the optical disk drive.
- 3. Run the **start_up.bat** under the root folder on DVD.
- 4. Click Integrated Installation on the menu.

Starter Pack		NEC
	Instruction Manuals	
	Versions	
F	Integrated Installation	
	Applications	
	Exit	
		Version S8.10-001.01(001)

5. On the following screen, choose the check boxes corresponding to the applications you want to install, and then click **Install**. The chosen applications are automatically installed.

	Product Info Collection Utility	Rev3.0.5	Not installed	
	RESTful Interface Tool	Rev2.0.0.0	Not installed	
				nstall

Note	• Applications available for installation are chosen by default.
------	--

- If your system environment does not satisfy the prerequisite for an application, you cannot install it. For details, see the on-screen information and *the manual of each applications*.
- To collect product information using a device information collection utility, RESTful interface tool needs to be installed. If it is not installed, some logs required for the maintenance may not be gathered.
- If the following message displayed during installing applications, click **No** to continue process.

Stop running this script?

A script on this page is causing your web browser to run slowly. If it continues to run, your computer might become unresponsive.

- 6. When a message indicating restart appears, click **OK** to restart the server.
- 7. See *the manual of each applications* to install the bundled software or confirm that the software is appropriate to your operating environment.

Now installation of applications is complete.

4. Setting up for Maintenance

We recommend setting up the following features for maintenance.

4.1 Specifying Memory Dump Settings (Debug Information)

This section explains the procedures for collecting a memory dump (debug information) in the server.

ImportantWhen you restart the system to save the memory dump, a message
informing you that the system is short of virtual memory might appear.
Ignore this message and proceed with the restart. If you reset or restart the
system again, the memory dump might not be saved normally.

1. Right-click the left bottom of screen, and click System from the menu displayed.

2. Click Advanced system settings.

3. In Startup and Recovery, click Settings.

System Properties	\times
Computer Name Hardware Advanced Remote	
You must be logged on as an Administrator to make most of these changes Performance Visual effects, processor scheduling, memory usage, and virtual memory

OK Cancel Apply	

4. Type a file name to store the debug information in the **Dump file** text box, and then click **OK**.

Startup and Recovery	×
System startup Default operating system: Windows Server 2016	
✓ Time to display list of operating systems: 30 ♀ ✓ Time to display recovery options when needed: 30 ♀	
System failure Write an event to the system log Automatically restart Write debugging information Automatic memory dump	
Dump file: D:\MEMORY.DMP Qverwrite any existing file Disable <u>a</u> utomatic deletion of memory dumps when disk space is low	
OK Cancel	

Note the following when specifying a dump file:

- We recommend specifying Kernel memory dump for Write debugging information.
- Specify a drive that has a free area of at least "total size of physical memory" + 400 MB (total size of physical memory + 1,100 MB when the total size is 4 TB or more).
- The size of the debug information (memory dump) changes if DIMM is added. Make sure that the free space of the drive to save the debug information is sufficient.

5. In Performance, click Settings.

Automatically manager Paging file size for each Drive [Volume Label]	ge paging file size for all drives drive Paging File Size (MB) System managed
Selected drive: Space available: © <u>C</u> ustom size: Initial size (MB): Ma <u>x</u> imum size (MB):	C: 366520 MB
○ S <u>y</u> stem managed si ○ <u>N</u> o paging file	ze <u>S</u> et
- Total paging file size for	
Minimum allowed:	16 MB
Recommended:	1889 MB
Currently allocated:	8192 MB
	OK Cancel

Note the following when specifying a paging file size:

- The paging file is used to collect debug information (dump file). The boot volume must have a paging file of its initial size ("total size of physical memory" + 400 MB (total size of physical memory + 1,100 MB when the total size is 4 TB or more) or more) is enough to store the dump file. Make sure to specify a sufficient paging file size. Recommended size: "the installed memory size" x1.5 or more
- See "System Partition" in *Chapter 1 (3.1 Precautions of Windows Server 2016 Installation)* for recommended value.
- When DIMM is added, re-specify the paging file according to the increased memory size.

10. Click OK.

If a message to restart Windows appears, restart the system according to on-screen message.

Specification of the memory dump settings is now complete.

4.2 How to Create a User-mode Process Dump File

The user-mode process dump file records information when an application error occurs.

If an application error occurs, get user-mode process dump information using the following procedures without closing the pop-up window that reported the error:

1. Right-click an empty area of the taskbar and then click **Task Manager** or press <Ctrl> + <Shift> + <Esc> keys to start Task Manager.

8			
Recycl	e Bin		
	Programs and Features		
	Power Options

-	<u>م</u> آ <i>م</i>	▲ 10 4	10:46 AM

2. Click More details.

🕎 Task Manager	_		×
Т	here are no running apps		
⊘ More <u>d</u> etails		<u>E</u> nd ta	sk

- 3. Click the **Processes** tab.
- 4. Right-click the name of the process that you want to get dump information for, and then click **Create Dump File**.
- 5. A dump file for the process is created in the following folder:

C:\Users\(user name)\AppData\Local\Temp

Tips	If the folder is not displayed, open Explorer, select Hidden items in the View tab.				
	📙 🛛 🔁 🖛 Administrator – 🗆 🗙				
	File Home Share View				
	Preview pane Medium icons Small icons Small icons Sum defum Medium icons Small ic				
	pane - Bis List Bic Details - by - III Hidden items items -				

Get the user-mode process dump file from the folder shown in step 5.

5. Backup of system information

After environment building, back up the setting information of the system in advance of any troubles.

- Back up system settings contained in system utility.
 See User's Guide (2. Description on System Utility) for details of system utility.
- Back up detail information of iLO 5.
 See "iLO 5 User's Guide" for details of procedure.

NEC Express5800 Series

Maintenance

This chapter explains maintenance of server, and what actions are to be taken in case of trouble when operating this server.

1. Failure Information

Describes how to collect the failure information. See this section in case of a failure.

2. Troubleshooting

Describes how to troubleshoot the server. See this section if you suspect a failure.

3. Windows System Recovery

Describes Windows recovery setup. See this section if the Windows is corrupt.

I. Failure Information

If the server does not work normally, you can collect failure information by using the following way.

The failure information to be described is to be collected only at the request of your sales representative.

Important Do not reset during dumping memory or restarting the server even if the message of virtual memory shortage appears.

I.I Collecting Event Logs

To collect the various event logs of the server, follow the steps below.

Tips

If a STOP error, system error, or stall occurs, restart the system and then follow the steps below.

1. Right-click the left bottom of screen, and click Event Viewer from the menu displayed.

2. Select the type of log in Windows Logs.

Application records events related to running applications.

Security records events related to security.

System records events that occur in Windows system components.

🛃 Event Viewer					- 5	×
File Action View Help						
🗢 🔿 🙍 📰 📓 📰

Source Section Source Section Subscriptions	Forwarded Events	Operational	0	0 Bytes	View Refresh Help	• •
					Application Open Properties Help	•

3. Click Save All Events As... from Action menu

- 4. Type the file name of the archived log in **File name**.
- 5. Select the type of the log file you want to save in **Save as type**, and then click **Save**.

1.2 Collecting Configuration Information

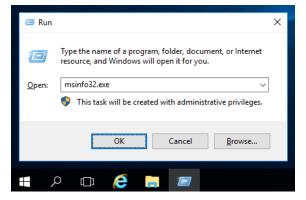

This section describes how to collect hardware information or configuration.

TipsIf a STOP error, system error, or stall occurs, restart the system and then follow
the steps below.

1. Right-click the left bottom of screen, and click **Run** from the menu displayed.

2. Type msinfo32.exe, and then press <Enter> key.

System Information starts.

- 3. Click **Export** from **File** menu.
- 4. Type a file name to save in **File Name**, and then Click **Save**.

1.3 Collecting User-Mode Process Dump

The user-mode process dump is the failure information related to application errors.

For details, see Chapter 1 (4.2 How to Create a User-Mode Process Dump File).

I.4 Collecting Memory Dump

If an error occurs, the dump file will be saved to get necessary information. You can specify any location for saving the diagnostic information. For details, see *Chapter 1 (4.1 Specifying Memory Dump Settings (Debug Information)*).

Consult with your sales representative before dumping the memory. Dumping the memory while the server is in operating normally will affect the system operation.

Important Do not reset during dumping memory or resetting the server even if the message of virtual memory shortage appears.

2. Troubleshooting

If this system does not operate as intended, check it according to the contents of *Maintenance Guide* before sending it for repair. If an item in the checklist corresponds with a problem you are experiencing, follow the processing instructions.

2.1 Problem of OS

[?] Unable to apply Standard Program Package

→ According to your environment, individual installation of firmware and drivers may be required before applying Standard Program Package.

Refer to Chapter 1 (3.4 Standard Program Package Installation) for details.

When the problem does not solve, collect log by following procedure to request survey through the supplier.

- 1. Sign-in to the Windows with an Administrators privilege.
- 2. Set the Starter Pack DVD to the drive.
- 3. Run the \packages\gatherlog.bat on the DVD.
- 4. Collect genelated Zip file.

3. Windows System Recovery

Recover the Windows system by using the following instructions if the system does not work normally.

Note

- After recovering Windows, install drivers and the Starter Pack referring to Chapter 1 (3.5 Setup of Device Drivers) and Chapter 1 (3.4 Standard Program Package Installation).
- If the Windows system cannot find hard disk drives, you cannot recover the Windows system.

3. I Recovery of Windows Server 2016

If the Windows does not start normally, you can recover it using the feature of the Windows installation media. To run this feature, start the installation media, and then choose **Repair your computer** in the setup wizard. We recommend that this option is performed by the system administrator.

If the RAID controller driver is required, take the following steps:

Note

When the server configures an on-board RAID controller and an internal optical disk drive, load the driver from a removable media. Copy the following folder from Starter Pack DVD to a removable media in advance. *Starter Pack>:\software\010\drivers\sw_raid1_driver*

- 1. After turning on the server or restarting the server, insert the OS installation media into the server.
- 2. Press <F11> key during POST to start Boot Menu.

In **One-Time Boot Menu**, select the optical disk drive to which OS installation media is set by Step 1, and then exit the menu.

 When the message "Press any key to boot from CD or DVD..." appears on the upper of the screen, press <Enter> key to boot from the media.

While boot-up proceeds, the message "Loading files..." appears.

- 4. Choose **Repair your computer** in the setup wizard.
- 5. Click Troubleshoot.
- 6. Click Command Prompt.
- After setting Starter Pack DVD to the drive, run the following command to load the driver: ("D:" means a drive name of DVD and this name depends on your system)

For on-board RAID controller:

drvload D:\software\010\drivers\sw_raid1_driver\ws2016_ws2019\SmartDQ.inf

Tips When the server configures an on-board RAID controller and an internal optical disk drive, load the driver from a removable media. ("E:" means a drive name of removable media and this name depends on your system) drvload E:\sw_raid1_driver\ws2016_ws2019\SmartDQ.inf

For RAID controller (N8103-189/190/191/192/193/194/195/201/237/238)

drvload D:\software\010\drivers\dac1_driver\SmartPqi.inf

 Tips
 The volume label for each drive can be checked from the display result of the dir command.

 Example: dir C:\

8. Exit the command prompt.

The driver installation is completed.
